RMB Internationalisation Business Insights report

Report Price
One-time fee EUR 5000 per BIC8

SWIFT has collaborated with its customers to create a wealth of intelligence to help you determine your strategic response to the internationalisation of the Chinese Renminbi (RMB), and to roll out your strategies in the most efficient and profitable way possible.

In a new white paper, *RMB internationalisation: Implications for the global financial industry*, created in collaboration with a number of customers, SWIFT explores the progress of RMB internationalisation to date, and examines the opportunities and threats this development creates for the banks.

Accompanying the white paper, our *RMB internationalisation Business Insights report*, built using information about actual RMB transactions going over SWIFT (extracted using SWIFT's Watch Business Intelligence tool), provides a unique set of data and **key business insights** to help you make informed decisions about where, when and how to pursue business opportunities related to the RMB.

Benefits

Insights into recent developments with the RMB, activity by financial institutions and in different countries, and transaction evolution and corridors by market.

Information to help identification and prioritisation of opportunities for business development in RMB payments.

Data - 21 tables containing detailed monthly transaction data that can be used by a financial institution to calculate market share in RMB transactions. (The actual tables and graphs with scale are provided in the report)
