

Alliance - disaster recovery

Class-
room

On-site
training

SWIFT Training
Our knowledge,
your solution.

You will learn how to

- ▶ Do business continuity planning using best practice guidelines
- ▶ Identify the technical details of disaster recovery procedures for SWIFTNet interfaces (e.g., certificate management)
- ▶ Apply the principles of SWIFTNet resilience theory to practical case studies for Alliance Gateway, Web Platform, Access and Entry

As a financial institution, your SWIFT operations department is a critical nerve centre that deserves special attention. To minimise the impact of a technical failure on your business, you should be prepared for any disaster that might arise. This course gives you best practice guidelines for business continuity planning and enables you to manage the disaster recovery processes for your Alliance interfaces. Backup strategy and recovery scenarios are discussed for the entire suite of connectivity products.

Audience

Alliance Gateway and Alliance Access/Entry administrators, business continuity managers with a technical background, IT implementation teams, etc.

Duration

Classroom course: 1 day
On-site training: as per your requirements

Prior knowledge

As this is a technical course, a good understanding of system administration is required. You will need knowledge of SWIFTNet PKI, such as delivered in the courses 'Understanding SWIFTNet services and security' or 'Managing PKI with Browse'.

You must have experience in managing the Alliance Access/Entry and/or Gateway interfaces, as taught in the courses 'Managing Alliance Access', 'Managing Alliance Entry' and 'Managing Alliance Gateway'.

Course content

- Principles of disaster recovery for SWIFTNet applications
 - SWIFTNet access, SWIFTNet Link, concentrator and application resilience
 - SWIFTNet Link and certificate management
- Case study: recovery for Alliance Gateway
 - Active/Standby versus Dual Active configurations
 - Recovery procedures
- Case study: recovery for Alliance WebStation
- Case study: recovery for Alliance Web Platform
- Case study: recovery for Alliance Access/Entry
 - Synchronising your live, local and remote back-up systems
 - PKI certificates and security profiles management
 - Resuming messaging after a failure
- Business continuity planning: best practice guidelines
