

# ISO 2022 methodology and modelling

On-site training

*SWIFT Training  
Our knowledge,  
your solution.*

## You will learn how to

- Perform a message requirements analysis
- Evaluate the consequences of business decisions on message design
- Navigate through the financial dictionary models from A to Z
- Build your own messages based on the ISO 2022 methodology
- Get the most out of modelling/UML concepts

This advanced course complements our XML course family and is targeted at those institutions that will develop their own ISO 2022 messages. The course combines theory and a practical approach through exercises on the Standards Workstation. It explains the different concepts related to the ISO 2022 methodology and its implementation with modelling software.

## Audience

This technical course is targeted at business analysts, project managers and developers of any institution wishing to create its own ISO 2022 messages to submit to the ISO registration authority.

## Duration

On-site training: up to 3 days, as per your requirements

## Prior knowledge

This course requires basic XML knowledge and/or a sound understanding of a specific business area (e.g. Exceptions and Investigations, Funds, SEPA, Trade Services Utility), which can be acquired through other SWIFT Training courses.

## Course content

- ISO 2022 methodology
- Business model
- Business component
- Message component
- Building UML models
- Rules and their various applications
- UML to XML generation
- Tracing between components
- Hands-on application of the above concepts
