Support for user-defines rules (cross-element rules).

A Web application helping T2S directly connected participants assess their readiness for T2S and simplify their acceptance and testing processes.

The easiest way to connect to SWIFT – Alliance Lite2

Alliance Lite2 provides a cloud-based connection to the SWIFT network and related applications and services. Easy to use and cost-effective, Alliance Lite2 supports all SWIFT message formats (MT and MX) and files, has screen-based message entry and workflow, and offers an extensive range of automation options. This allows to achieve straight-through processing of financial messages and files, all the way from your application to your banks or financial institutions or counterparties. SWIFT does offer a wide range of additional services around Alliance Lite2: turnkey services to get you up and running smoothly, automation assistance, training, operational service and support.

Latest updates

- AutoClient R1.2.1: 29 September 2015, mandatory – to be installed by June 2016
- batching capabilities for MX messages (in XMLv2 format )
- support for a file size up to 250Mb
- revised logging details for enhanced readability and user interpretation
- support for new Operating Systems ( Windows 8.1 and Windows Server 2012 .... )
- other maintenance items and fixes

For more details, see [www.swift.com/alliancelite2](http://www.swift.com/alliancelite2), or contact your SWIFT account manager or your nearest SWIFT sales office. If you are located in the Europe, Middle East and Africa (EMEA) region, you can send an email to [contactme@swift.com](mailto:contactme@swift.com).

SWIFT Integration Layer is the essential bridge between your internal systems and Alliance Lite2 (for connecting to SWIFT in the cloud) or Alliance Access. When your back office is using data formats or communication methods not compatible with Alliance Lite2's AutoClient or with Alliance Access, SWIFT Integration Layer provides an enhanced integration offering to enable the integration and automation of your back-office flows.

SWIFT Integration Layer delivers key benefits to your operations:

- It seamlessly links your business applications to SWIFT.
- It enables systems to connect to SWIFT, without any change to them.
- It automates all your back-office flows.
- It leverages SWIFT expertise to efficiently solve and implement your integration challenge.

Ensuring business continuity when your operations are disrupted

Alliance Lifeline is a reliable, cost-effective emergency service that enables you to keep on using SWIFT if your standard connection becomes unavailable. It can help you avoid delayed payments and missed deadlines. Alliance Lifeline lets you exchange all SWIFT message types and files and use SWIFT services until your main connection or backup site is operational. It features an Alliance Access-like interface that offers automated and manual message entry and supports basic message reconciliation. Alliance Lifeline is relevant for SWIFT users, regardless of whether their SWIFT interface is located at their premises or hosted by a third party.

For more details, see <http://www.swift.com/alliancelifeline>, or contact your SWIFT account manager or your nearest SWIFT sales office.

- Update 7.1.40 (SAAE): mid July 2017, mandatory
- Message Standards 2016

Supported versions: for more detail regarding the supported versions, please refer to the Compatibility Matrices

- Release 7.2: end June 2017, mandatory

For more details please visit [https://www.swift.com/our-solutions/a-to-z/release-7\\_2](https://www.swift.com/our-solutions/a-to-z/release-7_2)

- Power search
- InterAct SnF retrieved functionality
- Reports enhancements
- Channel prioritization
- Transformation tool enhancements
- Technology refresh

- AMH Control Centre
- Upgrade process enhancements
- Health report generation improvements
- Internal SIX connectivity – SIX Gateway
- Full Iso20022 EuroSIC format support
- Additional technology refresh

Available updates:

Update 3.3.1: release date 21/09/2015 - Support for SIC ISO20022 over SIXGateway and minor bug fixing for upgrades and RP Sync support  
Update 3.3.2: release date 10/11/2015 - fixing some issues holding back some upgrades

- Request / Response API
- business duplication check
- T2S signature
- Message modification overview
- Multiple authentication support
- Matching

Swiss Market Release

- Support for migration to SASS
- System Manager features
- gpi support

Update in description and end of support announced

Live date and description update

Live date and description updated

Star	Product	Release number	Release Type	Status June 2016	Live date	End Support	1	2	3	4	5	6	7	8	9	10	11	12	Mandatory upgrade	Description	Change log from March 2016
Connectivity	Alliance Connect Gold			Live and supported															The network connectivity product for the high volume users. <ul style="list-style-type: none"> <li>Both connectivity links are Leased Lines provided through our Network Partners. For the highest level of resiliency, it is advised to use two different Network Partners where possible.</li> <li>Load Sharing (using both links to routing FileAct/Interact traffic over the second link) and higher bandwidths (4Mb-6Mb)</li> <li>Portability-move between Alliance Connect products and/or network partner without changing the SWIFT VPN boxes</li> </ul>		
Connectivity	3SKey			Live and supported															The 3SKey (SWIFT Secure Signature Key) Solution is targeted for a multi-banking environment. In this approach, SWIFT provides, through banks, PKI-based credentials to corporate customers. Such credentials can then be used by corporate representatives to sign messages and files (for example, payment instructions) sent to their banks over any channel (for example, the Internet or FileAct). The credentials only become effective when registered by each bank separately. This solution is targeted for the corporate-to-bank segment.		
Connectivity	Euclid Connector Client	7.1	Minor	Live and supported															EUCLID Connector Client is able to accept connections established from a EUCLID PC or Server using certificates issued by a new Euroclear CA		
Connectivity	Euclid Connector Client	7.2	Minor	Live and supported															Security enhancements in terms of TLS protocol support, SHA-2 compliance and use of certificates issued against a new CA.		
Connectivity	Hardware Security Module			Live and supported															Hardware Security Modules (HSMs) play an important role in SWIFT security. They create and store customer PKI profiles and perform cryptographic operations such as signing. They are available as LAN-connected high performance boxes or USB-connected tokens and card readers.		
Messaging	• InterAct • FileAct • SWIFT WebAccess (Browse)	7.0	Major	Available																	
Messaging	SWIFTNet Online Operations Manager			Available																	
Messaging	• FIN • FINCopy • FINInform			Available																	
Reference data	SWIFTRef BIC Directory			Live and supported		November 2018													Move to one of two new directories starting Q1 2016 until Nov. 2018	Will be decommissioned end of November 2018. Not compatible with ISO9832:2014 standard. The standard is in transition period - from January 2015 through to November 2018.	
Reference data	SWIFTRef BIC Directory 2018			Live and supported															To ensure compliance with the revised BIC-standard, ISO 9362, the BIC Directory 2018 will differ only slightly from the current SWIFTRef BIC Directory reflecting BIC connectivity and time zone information in an <b>existing</b> field.		
Reference data	SWIFTRef BIC Plus			Live and supported															The BIC Plus directory will provide a richer version of the current BIC directory including current and historic FIN and SWIFTNet BICs plus a large number of new BIC-related data which will be reflected in <b>new</b> fields.		
Reference data	SWIFTRef Bank Directory Plus			Live and supported															Update scheduled for end June 2016 To ensure compliance with the revised BIC-standard, ISO 9362, the Bank Directory Plus will undergo a minor addition of content in an existing column of the directory. There are no changes to the structure of the file. The technical specifications, outlining the change to the directory, are available. The Bank Directory Plus will automatically be updated end June 2016 with FIN connectivity and timezone info. Interact & FileAct connectivity will follow in a later stage.	Update in description	
Reference data	SWIFTRef Bankers World Online			Live and supported															New release is scheduled for end September The new release will cover usability enhancements as well as financial data, credit rating and SSI (Standing Settlement Instructions) enrichments. In addition will it support additional languages, such as Spanish, French, etc.		
Reference data	SWIFTRef BIC Archive SWIFTRef BIC Archive online			Live and supported		December 2016													The SWIFTRef BIC Archive directory will be decommissioned in December 2016. Full content and much more will be covered in the new BIC Plus directory which will be available in Q2 2016. The BIC Archive Online will not be decommissioned.		
Reference data	SWIFTRef BIC Directory Online			Live and supported																	
Reference data	EURO/STEP1 Directory			Live and supported																	
Reference data	SWIFTRef IBAN Plus			Live and supported
