

Connect seamlessly to Alliance Lite2 or Alliance Access

Benefits

- > Enables systems to connect to SWIFT, without any change to them
- > Automates all your back-office flows
- > Leverages SWIFT expertise to efficiently solve and implement your integration challenge

SWIFT Integration Layer

The enhanced integration solution for connecting with Alliance Lite2 or Alliance Access

SWIFT Integration Layer makes a cloud or on premise connection to SWIFT possible to more business applications and more businesses than ever before. It is the essential bridge between your internal systems and Alliance Access or Alliance Lite2, for connecting to SWIFT.

Enabling your connection to SWIFT

Alliance Lite2 is a 'cloud-based' way to connect to the SWIFT network and related applications and services. Alliance Lite2 supports the message and file volume requirements of most SWIFT users.

As a true cloud service, Alliance Lite2 is subscription based. It enables reduced operational effort and cost. With its AutoClient function you can automate operations and integrate them with your back office. This provides fully automated upload and download of files.

When your back office is using data formats or communication methods not compatible with Alliance Lite2's AutoClient, SWIFT Integration Layer provides an enhanced integration offering to enable the integration and automation of your back-office flows.

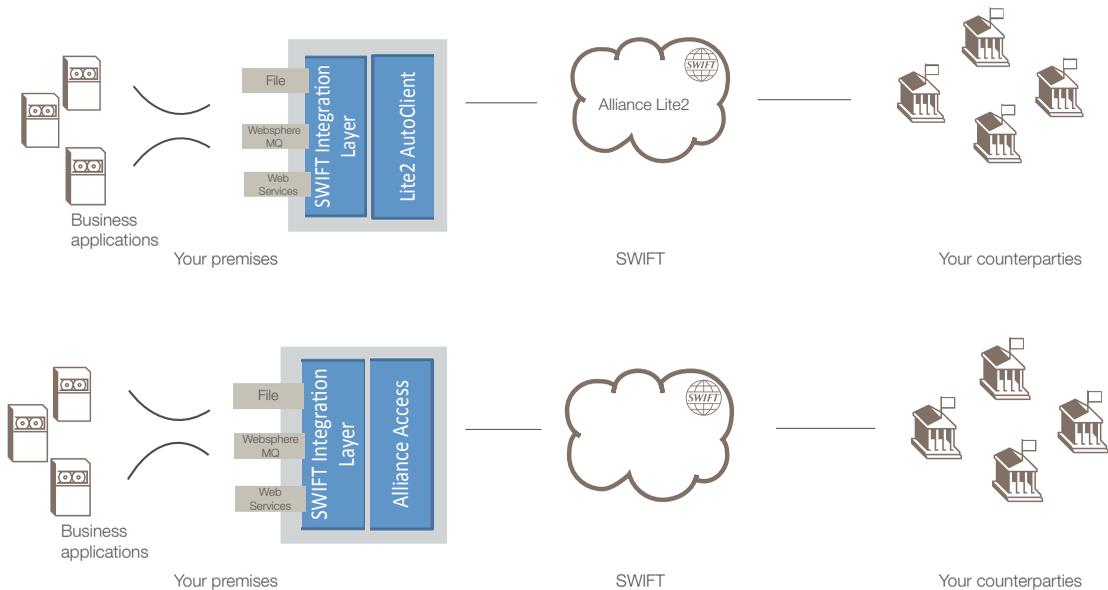

On top of its core data transformation and connectivity options, SWIFT Integration Layer can deliver additional business benefits:

- It reduces the cost of updating business applications for SWIFT specific network protocols or message formats.
- You can rely on SWIFT to develop the integration solution. Your IT staff do not need to become SWIFT experts.
- SWIFT Integration Layer combines the benefits of cloud connectivity for SWIFT and an on-premises solution to deliver your most complex integration needs.

.....

Seamlessly links your business applications to SWIFT with our lightest and easiest connection – Alliance Lite2, or our on premise solution – Alliance Access.

ⓐ How SWIFT Integration Layer works with your back-office applications

Features and functions

With SWIFT Integration Layer in place, you are effectively exchanging the information in your proprietary format messages with Alliance Lite2 or Alliance Access for onward communication over SWIFT.

SWIFT Integration Layer provides:

- Data Transformation services, converting from non-SWIFT proprietary message formats to SWIFT message formats (MT, ISO15022, MX, ISO20022) and vice versa
- Additional IBM WebSphere MQ or SOAP Web Services connectivity options for back-office communication, on top of the default file-based method
- Support for SWIFT specifics file formats (RJE, XMLv2) and messaging services (FIN, InterAct, FileAct)

Delivering the integration solution

SWIFT Integration Layer is delivered as part of an integration solution to enable connectivity with SWIFT in the cloud or on-premise solution.

To deliver that solution SWIFT first needs to understand your specific requirements and the relevant back-office architecture.

This is done with the help of SWIFT consultants — SWIFT’s team of experts who understand the underlying workings of financial messaging systems. From the initial investigation of customer needs, SWIFT will manage the project all the way through to go-live.

SWIFT Integration Layer is at the core of the integration solution with Alliance Lite2 or Alliance Access.

The offering includes the following:

- SWIFT Integration Layer software
- Consulting Services: from systems analysis and design, to implementation and go-live
- The world-class SWIFT support services
