Applications	Daily Validation Reports		Live and supported						
Applications	KYC Security Attestation		Live and supported					<p>KYC Security Attestation (KYC-SA) is a central application for users to self-attest their level of compliance against SWIFT's Customer Security Controls Framework (CSCF). The KYC-SA application also enables users to securely exchange their security status information with selected counterparties, supporting cyber risk management, transparency and business due diligence. All SWIFT users must log in to the KYC-SA and submit self-attestations for each of their live BICs by the end of each year against latest CSCF baseline.</p> <p>As of 2019, KYC Security Attestation will continue to evolve with smaller but more frequent updates for the introduction of new functionalities permitting to</p> <ul style="list-style-type: none"> - Simplify (re)attestation work, - Enhance sharing of attestation - Facilitate consumption of counterparties' data - Ease operations and reporting 	
Standards	SWIFT Translator	1.4	Minor	Live and Supported	30-Jun-2022			<p>SWIFT Translator is a messaging format translation solution which allows customers to define, validate, and translate messages from and to messaging formats (e.g. ISO20022, MT, proprietary...). As the SWIFT Translator solution is network and interface independent, it can be deployed and integrated in a flexible manner.</p> <p>On top of format translation, SWIFT Translator complements MyStandards benefits in solving standards format related issues. Users can:</p> <ul style="list-style-type: none"> - Reuse MyStandards usage guidelines as a source or target format, reducing time and effort spent in format definition and validation, - Define and document their proprietary/non-SWIFT formats on MyStandards <p>SWIFT Translator is composed of two components: a Designer and a Runtime. These are further described in the Service Description available on the Knowledge centre.</p>	New
