

Cyber-security workshop

Increase awareness in your organisation

*SWIFT Training
Our knowledge.
Your solution.*

Cyber-security is on everyone’s agenda these days and we are all putting in place measures to avoid attacks on our communications systems. The cyber-attacks don’t only come from external sources, but also from within your company. Building on many years of expertise in performing health checks on our customers’ infrastructure, we are now offering a cyber-security workshop. This half-day session will help you raise awareness about cyber-security, the risk areas and implications on your company. You will also receive tips and tricks on the usage of SWIFT products and services to improve security. This workshop is moderated by one of our SWIFT experts and is organised at your premises.

Audience

The workshop is designed for everyone in your organisation who needs to increase their awareness about cyber-security. The minimum number of people required to run the workshop is 6.

Duration

0.5 day

Session content

The session is structured in three modules:

- Setting the scene: what is cyber-security? What are the risks?
- Cyber-security role-play
- Wrap up and group discussion about cyber-security and the SWIFT environment

The cyber-security role play is created for 6 players (network security specialist, manager, security advisor, application security specialist, HR & training manager, Security detection systems specialist). The scenario-based role-play is being facilitated by our SWIFT expert. During the role-play, participants are confronted with the security risks and measures to take. The scenarios are based on real-life events. Participants need to take decisions which will have an impact on the evolution of the game.

If you have a large group of people to attend this workshop, we will run several role-play sessions. In this case, we can train facilitators from your institution prior to the workshop who will facilitate the cyber-security role-play together with the SWIFT expert.

Customised session

On your request, we can bundle the cyber-security workshop with additional training or consulting.

More information

If you are interested in organising this workshop, simply contact your Account Manager or your local SWIFT Training team.
