Watch Traffic Analytics, Banking Analytics and Banking Analytics Premium – new enhancements

Commencing from 9 August 2018, the below enhancements will be available in Watch Traffic Analytics, Banking Analytics and Banking Analytics Premium:

- **gpi active BIC8**: To identify whether or not a stated institution is an active gpi participant and thus able to send/receive gpi traffic during the reported period for a specific currency.
- **gpi active counterparty BIC8**: To identify whether or not a correspondent is an active gpi participant and thus able to send/receive gpi traffic during the reported period for a specific currency.
- **gpi CUG member**: To identify whether or not a specific institution is a gpi CUG member during the reported period, irrespective of the currency.
- **gpi CUG member counterparty**: To identify whether or not a correspondent is a gpi CUG member during the reported period, irrespective of the currency.
- **Message type group**: This allows you to group all MT 103 message types (MT 103, MT 103+, MT 103R) into a single value and as such report on all MT 103s as a whole.

Please note that in Watch Banking Analytics Premium, the currency filter in the Payments Wizard has now been enhanced following customer feedback. Users are now able to filter again on a single currency instead of currency pairs.

Our factsheet is also now available in [Japanese](#) and other languages including [Spanish](#) and [Simplified Chinese](#).

New features in Watch Banking Insights

The below enhancements will be deployed in Watch Banking Insights as of 9 August 2018:

- **Ungrouped message types:** In the past, MT 103 messages were only shown as a group. As from now, on you will be able to filter on MT 103, MT 103R, and MT 103+ individually.
- **gpi flag available in Cash & Payments dashboard:** This flag allows gpi member banks to track their gpi adoption at corridor and currency levels. The gpi flag takes into account the impact of Standards Release 2017 and more precisely the fact that all institutions are now able to receive messages with field 121 (UETR) and tag 111 (service code). On top of the content in field 111 and 121, the gpi flag also takes into account the BICs and currencies disclosed in the gpi Directory.

New visualisations on gpi adoption will soon be added to the Cash and Payments dashboard.
