Preface

Purpose of this document

This *Certificate Policy* applies to SWIFT Qualified Certificates for Electronic Seals issued by SWIFT. It indicates the requirements and procedures to be followed, and the responsibilities of the parties involved, during the lifecycle of the Certificates in accordance with the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement*.

1 INTRODUCTION

A Certificate Policy is a set of rules, requirements, and definitions determining the level of assurance provided by a determined type of certificate, and its applicability to a particular community and/or class of applications with common security requirements. Different levels of assurance may correspond to different Certificate Policies and different types of certificates. Certificates issued in accordance with a determined Certificate Policy include a Certificate Policy identifier, a unique number called "Object Identifier" (OID), which can be used by Relying Parties to determine certificate suitability for a particular application.

SWIFT registers its Certificate Policy Object Identifiers under the root "1.3.21.6".

1.1 Overview

This *Certificate Policy* applies to Qualified Certificates for Electronic Seals issued by SWIFT, with the meaning of Qualified Certificates for Electronic Seals as specified in EU Regulation 910/2014 on electronic identification and trust services for electronic transactions in the internal market¹ (the "eIDAS Regulation"). It indicates the requirements and procedures to be followed, and the responsibilities of the parties involved, during the lifecycle of the certificates in accordance with the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement [1]*.

Every SWIFT Qualified Certificate for Electronic Seals issued under this *Certificate Policy* will carry a Certificate Policy OID corresponding to the assurance level of that certificate as stated in [section 1.2](#) and to the rules, requirements and definitions applicable as per the present *Certificate Policy*.

"SWIFT Qualified Certificates for Electronic Seals" are issued to Subscribers and are for use in conjunction with specific SWIFT services and products allowing use of such Qualified Certificates for Electronic Seals as documented in the relevant service documentation.

SWIFT Qualified Certificates for Electronic Seals issued under this *Certificate Policy* provide assurance of the identity of the Subscriber as further described in this *Certificate Policy*.

1.1.1 PKI Hierarchy

SWIFT Qualified Certificates for Electronic Seals are issued by SWIFTNet PKI CA (see [section 1.3.1](#) below).

SWIFTNet PKI CA has a self-signed CA certificate issued to Subject "o=swift", and is hence the Root CA and Trust Anchor in the SWIFTNet PKI.

SWIFTNet PKI CA certificate details are outlined in the following table:

¹ Regulation (EU) No 910/2014 of the European Parliament and of the Council of 23 July 2014 on electronic identification and trust services for electronic transactions in the internal market and repealing Directive 1999/93/EC. OJ L 257, 28.8.2014, p. 73–114.

Subject	O=SWIFT
Issuer	O=SWIFT
Serial Number	5d 4f 7e 8e
Valid From	Aug 17 17:18:33 2019 GMT
Valid To	Aug 17 17:48:33 2037 GMT
Subject Key Identifier	52:A3:01:28:60:D9:95:27:41:E2:10:9E:09:9F:AB:83:D0:F1:96:42
Authority Key Identifier	52:A3:01:28:60:D9:95:27:41:E2:10:9E:09:9F:AB:83:D0:F1:96:42
Thumbprint (SHA256)	55:33:0F:AB:C2:67:28:86:D4:D3:D8:2F:18:6D:D0:3F:1C:3B:96:61:D0:99:2E:14:4A:5C:1F:97:01:8F:C8:86

The SWIFTNet PKI CA certificate is available for download here:
https://aia.pki.swift.com/swiftnet_root_2019.cer

Prior to March 2020, SWIFT Qualified Certificates for Electronic Seals were issued by the SWIFTNet PKI CA certificate valid until June 2022 (hereafter referred to as legacy), which has been replaced by the current SWIFTNet PKI CA certificate valid until August 2037, following a root key renewal activity. SWIFT Qualified Certificates for Electronic Seals issued by the legacy CA certificate will remain valid until their expiry date, at which point they will be available for re-key by the current SWIFTNet PKI CA certificate, above.

The legacy SWIFTNet PKI CA certificate details are outlined in the following table:

Subject	O=SWIFT
Issuer	O=SWIFT
Serial Number	3c 09 32 7d
Valid From	June 15, 2002 11:51:47 GMT
Valid To	June 15, 2022 12:21:47 GMT
Subject Key Identifier	3e:30:b3:3b:35:97:57:ff:f1:40:db:1b:45:01:38:2e:15:a7:9e:b2
Authority Key Identifier	3e:30:b3:3b:35:97:57:ff:f1:40:db:1b:45:01:38:2e:15:a7:9e:b2
Thumbprint (SHA1)	d9:a2:35:c8:8c:87:5b:17:11:74:d1:07:6b:59:6a:f9:e0:a0:36:3d

This legacy SWIFTNet PKI CA certificate is available for download here:
https://www2.swift.com/syndres/certificates/swiftnet_root.der

1.2 Document Name and Identification

The present document is the *Certificate Policy* titled “SWIFT Qualified Certificates for Electronic Seals – Certificate Policy” and is referred to in this document as the *Certificate Policy*.

This *Certificate Policy* is structured according to the framework defined in IETF RFC 3647 "Internet X.509 Public Key Infrastructure Certificate Policy and Certification Practices Framework".

By including the following unique Object Identifier in its SWIFT Qualified Certificates for Electronic Seals, SWIFT guarantees conformance with the Certificate Policy requirements as described in the present document.

Name of Certificate Type	Object Identifier
SWIFT Qualified Certificate for Electronic Seals	1.3.21.6.3.10.200.7

This *Certificate Policy* is based on the QCP-I policy defined in ETSI EN 319411-2 ("certificate policy for EU qualified certificates issued to legal persons"). The SWIFT Qualified Certificates for Electronic Seals certificate profile ([sections 3.1](#) and [7.1](#) below) deviates from the requirements described in ETSI EN 319412-2 and 319412-3.

Certificates issued under these requirements are designed to support advanced electronic seals based on a qualified certificate for electronic seals, defined in articles 3 and 36 of the eIDAS Regulation.

1.3 PKI Participants

In the context of issuing SWIFT Qualified Certificates for Electronic Seals, SWIFT is acting as the Trust Service Provider. As Trust Service Provider, and subject to other PKI Participants complying with their respective obligations and responsibilities, SWIFT has final and overall responsibility for the provision of the SWIFT Qualified Certificates for Electronic Seals offering, namely the certificate generation services through the SWIFTNet PKI Certification Authority, the registration services through the SWIFTNet PKI Registration Authority, the Revocation Management Services, the Revocation Status Information Service (providing certificate validity status information), and the Dissemination Services. Other PKI participants are the Subject Device (HSM) Provisioning Services, the Subscribers, and the Relying Parties.

All communications between certification component service providers regarding any phase of the lifecycle of the certificates are secured with PKI-based encryption and signing or strong authentication techniques (PKI-based or not) to ensure confidentiality, mutual authentication and secure logging/auditing.

1.3.1 Certification Authorities

SWIFT operates the SWIFTNet PKI CA, the Certification Authority that issues the SWIFT Qualified Certificates for Electronic Seals that are ruled by this *Certificate Policy*.

1.3.2 Registration Authorities

SWIFT operates the SWIFTNet PKI RA, the Registration Authority of the SWIFTNet PKI in the context of issuing the SWIFT Qualified Certificates for Electronic Seals.

1.3.3 Subscribers

Subscribers of SWIFT Qualified Certificates for Electronic Seals are those organisations that contract with SWIFT for the issuance of a SWIFT Qualified Certificate for Electronic Seals in their name. Subscribers are SWIFT users that require a SWIFT Qualified Certificate for Electronic Seals to generate an advanced electronic seal for their use of specific SWIFT services and products as documented in the relevant service documentation.

SWIFT itself can be a Subscriber of SWIFT Qualified Certificates for Electronic Seals, to support the use of specific SWIFT services and products as documented in the relevant service documentation. To avoid a conflict of interest, SWIFT ensures that the identification and

authentication processes, and certificate lifecycle operational processes, are handled in exactly the same way for all Subscribers.

1.3.4 Relying Parties

The Relying Parties are those persons who are relying on a SWIFT Qualified Certificate for Electronic Seals by verifying the advanced electronic seal of a Subscriber.

1.3.5 Other Participants

SUBJECT DEVICE PROVISIONING SERVICES

The Secure Subject Devices required to contain the private key corresponding to the SWIFT Qualified Certificate for Electronic Seals (the Hardware Security Module, HSM) are provided to the Subscribers by SWIFT. The creation of the certificate key pair is performed by and under sole control of the Subscriber, the private key is generated in the HSM and cannot be exported in clear text form.

DISSEMINATION AND REPOSITORY SERVICES

SWIFT operates the Dissemination Services (publication of *Certification Practice Statement*, *Certificate Policy*, *General Terms and Conditions*, CA certificate, and other related, public documents). These services are available from <https://www.swift.com/pkirepository>. This interface also provides access to former versions of these documents (*Certification Practice Statement*, *Certificate Policy*, *General Terms and Conditions*).

Access to CRLs, CA certificates, certificates download, certificates status is provided through the SWIFT network and related hardware and software configuration required for SWIFT connectivity. A combined CRL is also publicly available from <https://www2.swift.com/pkirepository/SWIFTCa1.crl>

Dissemination and Repository Services are provided as described in [section 2](#) of the present *Certificate Policy*.

REVOCAION MANAGEMENT SERVICES AND REVOCAION STATUS INFORMATION SERVICES

SWIFT is operating the Revocation Management Services and the Revocation Status Information Services (which provide certificate validity status information) with regards to the SWIFT Qualified Certificates for Electronic Seals that are ruled by this *Certificate Policy*.

Revocation of a SWIFT Qualified Certificate for Electronic Seals can be requested by the Subscriber to which the certificate is issued, as well as by SWIFT as Trust Service Provider, as ruled by the present *Certificate Policy* (see [section 4.9.1](#)).

1.4 Certificate Usage

1.4.1 Appropriate Certificate Uses

SWIFT QUALIFIED CERTIFICATES FOR ELECTRONIC SEALS

These certificates have a Policy OID 1.3.21.6.3.10.200.7.

"SWIFT Qualified Certificates for Electronic Seals" are issued to Subscribers as defined in [section 1.3.3](#). The creation of the keys is performed by the Subscriber, the key-size is 2048 bit, the corresponding private key is generated in, and resides in, an HSM (and cannot be exported in clear text form), and the validity period is 2 years.

The certificates issued under this *Certificate Policy* provide assurance of the identity of the Subscriber, and are for use in conjunction with specific SWIFT services and products allowing use of such Qualified Certificates for Electronic Seals as documented in the relevant service documentation.

The permitted usage of a SWIFT Qualified Certificate for Electronic Seals is limited to the support of advanced electronic seals in connection with the provision and use of specific SWIFT services and products only. See [section 7.1](#) for more information on the KeyUsage definition of a SWIFT Qualified Certificate for Electronic Seals.

The Subscriber is identified through an ISO 9362 Business Identifier Code (BIC) and the `organizationIdentifier` described in [section 3.1](#). Both of these identifiers are contained in the certificate Subject field.

1.4.2 Prohibited Certificate Uses

SWIFT Qualified Certificates for Electronic Seals may not be used for any purpose other than advanced electronic seals as defined in the eIDAS Regulation and as further set forth in this *Certificate Policy*.

When a SWIFT Qualified Certificate for Electronic Seals expires or is revoked, the Subscriber must no longer use the associated private key after the expiry or revocation date, or have the private key signed or certified by another trust service provider.

1.5 Policy Administration

1.5.1 Organisation Administering the Document

This document is administered by the SWIFTNet PKI Policy Management Authority (PMA), which consists of different complementary organisational entities and working groups within SWIFT managing SWIFTNet PKI.

The SWIFTNet PKI PMA has the responsibility for continually and effectively managing SWIFTNet PKI related risks. This includes a responsibility to periodically re-evaluate risks to ensure that the controls that have been defined remain appropriate, and a responsibility to periodically review the controls as implemented, to ensure that they continue to be effective. This is covered by the Information Security Risk Management framework at SWIFT.

1.5.2 Contact Person

All questions and comments regarding this *Certificate Policy* should be addressed to the representative of the SWIFTNet PKI Policy Management Authority:

S.W.I.F.T. SC - IT - Global Security
Avenue Adele 1
1310 La Hulpe
Belgium

Tel: +1 540 7271608 - E-mail: swift-pma@swift.com

1.5.3 Person Determining CPS Suitability for the Policy

The SWIFTNet PKI Policy Management Authority (PMA) determines CPS suitability for the present *Certificate Policy*. This determination is limited to the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement*.

1.5.4 Approval Procedures

The SWIFTNet PKI Policy Management Authority (PMA) approves this *Certificate Policy* and any subsequent changes.

The existing SWIFT Change Control mechanism will be used to trace all identified changes to the content of this *Certificate Policy*. Minor changes will be clearly labelled, making it possible to identify which version of this *Certificate Policy* is applicable to SWIFT Qualified Certificates for Electronic Seals issued at a given time. Major changes will be documented as such, and will initiate the creation of a new Certificate Policy OID.

Comments, questions, and change requests to this *Certificate Policy* should be addressed to the SWIFTNet PKI Policy Management Authority specified in [section 1.5.2](#) - Contact Person.

1.6 Definitions and Acronyms

Terms	Definitions
Activation Data	Data values, other than private and public keys, that SWIFT requires to initiate the certification process and to operate the cryptographic modules. Activation data must be protected. Examples of activation data include PINs, passwords, and activation secrets.
Certificate	A unit of information contained in a file. At a minimum, a certificate lists the issuer of the certificate and a public key, and indicates the user that holds the corresponding private key. The certificate is digitally signed by the SWIFTNet Certification Authority (CA).
Certificate Generation Activation Secrets	Data values that are required to initiate the certification process, and that link the certificate registration with the actual certificate issuing.
Certificate Revocation List	<p>A signed list of identifiers of certificates that have been revoked. Abbreviated as CRL. It is made available by the SWIFTNet PKI CA to Subscribers and Relying Parties. The CRL is updated after each certificate revocation process. The CRL contains identifiers of revoked certificates that are past their validity date (that is, expired).</p> <p>SWIFTNet PKI provides both partitioned CRLs and a combined CRL. Partitioned CRLs contain information on a specific subset of revoked SWIFT Qualified Certificates for Electronic Seals. Each SWIFT Qualified Certificate indicates in which partitioned CRL its revocation information can be found. The combined CRL contains information on all revoked SWIFT Qualified Certificates for Electronic Seals.</p>
HSM	Hardware Security Module. An electronic device offering secure key pair generation and storage, and implementing cryptographic operations using the stored key pairs.
Qualified Certificate for Electronic Seals	A certificate that is issued by a Qualified Trust Service Provider and that meets the requirements laid down in Annex III of the eIDAS Regulation.
Relying Party	<p>Person or organisation acting upon a certificate, typically to verify signatures or electronic seals by the Subscriber or to perform encryption towards the Subscriber. The Relying Party relies upon the accuracy of the binding between the Subscriber public key distributed via that certificate and the identity and/or other attributes of the Subscriber contained in that certificate.</p> <p>In the context of this <i>Certificate Policy</i> for SWIFT Qualified Certificates for Electronic Seals, Relying Parties are as further defined in section 1.3.4.</p>
Subscriber	<p>Person or organisation contracting with the Certification Authority, for being issued one or more certificates.</p> <p>In the context of this <i>Certificate Policy</i> for SWIFT Qualified Certificates for Electronic Seals, the Subscribers are as further defined in section 1.3.3.</p>
SWIFT	S.W.I.F.T. SCRL
SWIFTNet Directory	An online repository of institutions that are connected to SWIFTNet. The SWIFTNet Directory also shows the Public Key Infrastructure (PKI) certificates and Role-Based Access Control (RBAC) roles that the customer's security officers have issued to the operators, applications, and interfaces.
SWIFTNet PKI	A pervasive security infrastructure based on public-key cryptography, which provides digital signatures and supporting certification services. SWIFTNet Public Key Infrastructure comprises the SWIFTNet Certification Authority (CA), the SWIFTNet Registration Authority, and the SWIFTNet Directory. These authorities provide the customer with online certificate management capabilities.

Terms	Definitions
SWIFTNet PKI CA	The SWIFTNet PKI Certification Authority, operated by SWIFT, creates and manages certificates for entities that have been registered by the SWIFTNet PKI Registration Authority.
SWIFTNet PKI RA	A SWIFT body responsible for identifying and authenticating an institution and its initial users of the SWIFTNet Public Key Infrastructure (SWIFTNet PKI) (for example, an institution's security officers), and for performing certificate lifecycle actions (such as validating certificate requests, issuing certificate generation activation secrets, processing revocation requests).

Acronym	Definition
ARL	Authority Revocation List
BIC	Business Identifier Code
CA	Certification Authority
CMP	Certificate Management Protocol
CP	Certificate Policy
CPS	Certification Practice Statement
CRL	Certificate Revocation List
DN	Distinguished Name
HSM	Hardware Security Module
KMA	Key Management Application
LSO	Local Security Officer
OCSP	Online Certificate Status Protocol
OID	Object Identifier
PKI	Public Key Infrastructure
PMA	Policy Management Authority
RA	Registration Authority
SIPN	SWIFT Secure IP Network
SNL	SWIFTNet Link

2 PUBLICATION AND REPOSITORY RESPONSIBILITIES

2.1 Repositories

The SWIFTNet Directory is a centralised X.500 directory of entities that stores the certificates and Certificate Revocation Lists that the Certification Authority issues. An Authority Revocation List (ARL) is published in the SWIFTNet Directory. The SWIFTNet Directory identifies an entity by its Distinguished Name (DN).

The *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* is available online on <https://www.swift.com/pkirepository>. This repository shall also contain other public documents related to the issuance of SWIFT Qualified Certificates for Electronic Seals, such as the present *Certificate Policy*, the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* [4], and the current and legacy SWIFTNet PKI CA public key certificate.

A combined Certificate Revocation List (CRL), signed by the current SWIFTNet PKI CA certificate is available from <https://www2.swift.com/pkirepository/SWIFTCA1.crl>. This CRL provides revocation status of SWIFT Qualified Certificates for Electronic Seals issued by both the legacy SWIFTNet PKI CA certificate (see [section 1.1.1](#)), and the current SWIFTNet PKI CA certificate. Relying parties must ensure they have established trust in the current SWIFTNet PKI CA certificate, available for download from https://aia.pki.swift.com/swiftnet_root_2019.cer.

Certificates issued prior to March 2020 can retrieve the same combined CRL, signed by the current SWIFTNet PKI CA from <https://www2.swift.com/pkirepository/SWIFTCA.crl>.

The CRLs available on <https://www2.swift.com/pkirepository/SWIFTCA.crl> and <https://www2.swift.com/pkirepository/SWIFTCA1.crl> contain exactly the same information.

2.2 Publication of Certification Information

SWIFTNet PKI CA publishes certificates and Certificate Revocation Lists (CRLs) in the SWIFTNet Directory. A combined Certificate Revocation List (CRL) is also publicly available on <https://www2.swift.com/pkirepository/SWIFTCA1.crl>.

Revocation status information of SWIFT Qualified Certificates for Electronic Seals is made available beyond the validity period of the certificate in the combined CRL.

The certificates and Certificate Revocation Lists are available to security officers through SWIFTNet Link.

2.3 Time or Frequency of Publication

New CRLs are created either by the re-signing of existing CRLs before the CRL 'Next Update' value or immediately after a certificate revocation. The new partitioned CRL(s) are published in the SWIFTNet Directory and will be available for Relying Parties to download within 7 minutes after creation. The combined CRL available on <https://www2.swift.com/pkirepository/SWIFTCA1.crl> is published every 24 hours.

Certificates are published in the SWIFTNet Directory immediately after creation. Expired certificates are removed from the SWIFTNet Directory when a new certificate is issued to the same Subject Distinguished Name (DN) as described in [sections 3.3](#) and [4.7](#) on certificate re-key.

Updates to the present *Certificate Policy*, the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [1], the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* [4], and other public documents are published whenever a change occurs, ensuring a period of minimum fourteen (14) calendar days between the publication date and the effective date (see [section 9.12](#)).

2.4 Access Controls on Repositories

The Subscribers and Relying Parties have **Read** access to the certificates and CRLs in the SWIFTNet Directory.

Write access to the certificates and CRLs in the SWIFTNet Directory is restricted to the SWIFTNet PKI CA.

3 IDENTIFICATION AND AUTHENTICATION

3.1 Naming

The SWIFT Qualified Certificates for Electronic Seals are issued to Subscribers as defined in [section 1.3.3](#). A Subscriber is identified by a Business Identifier Code (BIC), which is a standardized (ISO 9362) identifier for financial and non-financial institutions to facilitate automated processing of telecommunication messages in banking and related financial transaction environments.

SWIFT Qualified Certificates for Electronic Seals have a Subject Distinguished Name (DN) with the pattern `cn=%<number>,cn=Qualified Enterprise,organizationIdentifier=<organization Identifier>,o=<BIC>,o=swift` in which the `cn=%<number>` part is optional, and `<number>` is a numeric string with a maximum length of 8 digits.

The name and element representing the identity of the certificate's Subject is the `o=<BIC>`, appearing in second level after root `o=swift`.

The semantics of the `organizationIdentifier` are further detailed in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement*. The optional `cn=%<number>` part allows the Subscriber to handle multiple SWIFT Qualified Certificates for Electronic Seals in its organisation. Name uniqueness is enforced so that a certificate issued to a Subscriber will never be re-issued to a different Subscriber.

SWIFT Qualified Certificates for Electronic Seals are issued by the SWIFTNet PKI CA, which has a self-signed CA certificate issued to Subject “`o=swift`”, and is hence also the Root CA and Trust Anchor in the SWIFTNet PKI.

SWIFT Qualified Certificates for Electronic Seals include certificate extension “Issuer Alternative Name” to indicate the name of the Trust Service Provider organisation as stated in the official records, and the country in which it is established, as “`cn=SWIFTNet PKI CA,organizationIdentifier=VATBE-0413330856,o=S.W.I.F.T. SCRL,c=BE`”

3.2 Initial Identity Validation

3.2.1 Method to Prove Possession of Private Key

The possession of the private key for SWIFT Qualified Certificates for Electronic Seals issued by the SWIFTNet PKI CA is verified by validating the digital signature during a “proof-of-possession” PKIX-CMP² exchange.

3.2.2 Authentication of Identity

SWIFT QUALIFIED CERTIFICATE FOR ELECTRONIC SEALS – REGISTRATION PROCESS

Prerequisites:

The SWIFTNet PKI CA issues SWIFT Qualified Certificates for Electronic Seals to Subscribers as defined in [section 1.3.3](#). Therefore, an organisation requesting a SWIFT Qualified Certificate for Electronic Seals must fulfil the necessary prerequisites to obtain SWIFT network connectivity. This includes setting up a hardware and software configuration

² Certificate Management Protocol, RFC 4210

that allows connectivity on SWIFTNet, and offers a strong authentication mechanism, strong confidentiality and integrity protection, and a trusted communication channel for the Subscriber to communicate with SWIFT.

As part of its configuration, the Subscriber defines at least two “Local Security Officer” (LSO) accounts that are entitled to manage the Subscriber’s SWIFTNet configuration. The Subscriber can choose to work in a dual authorisation mode, in which a second LSO account needs to approve the configuration change introduced by a first LSO account.

The LSO accounts are entitled by the Subscriber to manage its Qualified Certificate(s) for Electronic Seals. The LSO accounts are defined as part of the SWIFT network connectivity setup. The LSO accounts must belong to the Subscriber organisation. [Section 4.1.2](#) elaborates this process.

The identity validation process includes the validation by SWIFT of the identity of the Subscriber and involves in-person identity validation of its authorised representative(s). SWIFT will ask the Subscriber to provide identity information and supporting documents as required to perform the identification. The identification is based on documents that are applicable in the local country, such as a valid Certificate of Incorporation, and a valid personal identification document. SWIFT stores the identification documents and retains this information for the required period as defined in [section 5.5](#).

If a physical meeting is not feasible, identity validation will be performed by requiring each authorised representative to duly sign the required documents using a qualified electronic signature based on a qualified certificate for electronic signatures and to e-mail the documents to SWIFT with the following statement: 'I certify this is a true and authentic copy of the copied or original document'.

Subscription to SWIFT’s Qualified Certificates for Electronic Seals offering, and identification and authentication procedures for registration by the SWIFTNet PKI RA are detailed in SWIFT internal documents (*Qualified Certificate for Electronic Seals (QCES) Customer Identification and Subscription process*).

3.3 Identification and Authentication for Re-key Requests

Certificate renewal as defined in PKI standards, that is, issuing a new certificate to an existing key pair, is not implemented by the SWIFTNet PKI.

Subscribers that need to renew their certificates shall also be required to generate new key pairs (known as re-key).

Re-key requests are considered to be new certificate requests. Before such new certificates are issued, the identity of the Subscriber and the authorised representative will be re-verified as described in [section 3.2.2](#) on Initial Identity Validation. Updated or new identification documents are added to the customer information file and retained for the required period as defined in [section 5.5](#).

3.3.1 Identification and Authentication for Routine Re-key

The same process as for Initial Identity Validation is used ([section 3.2.2](#)).

3.3.2 Identification and Authentication for Re-key after Revocation

The same process as for Initial Identity Validation is used ([section 3.2.2](#)).

3.4 Identification and Authentication for Revocation Request

The LSO accounts are entitled by the Subscriber to which they belong to manage its Qualified Certificate(s) for Electronic Seals, including revocation. The LSO accounts are defined as part of the SWIFT network connectivity setup.

Requests for revocation of a certificate are authenticated. Identification and authentication procedures for revocation by the Certification Authority (for reasons discussed in [section 4.9.1](#)) are detailed in SWIFT internal documents.

4 CERTIFICATE LIFECYCLE OPERATIONAL REQUIREMENTS

4.1 Certificate Application

4.1.1 Who Can Submit a Certificate Application?

A SWIFT Qualified Certificate for Electronic Seals can be requested by a Subscriber “Local Security Officer” account. The LSO accounts are mandated by the Subscriber, as discussed in [section 3.2.2](#).

4.1.2 Enrolment Process and Responsibilities

The LSO account as registered with SWIFT and entitled by the Subscriber to manage its SWIFT Qualified Certificate(s) for Electronic Seals uses the “Secure Channel” application to communicate with the RA, and request a SWIFT Qualified Certificates for Electronic Seals.

The Subject DN for a SWIFT Qualified Certificate for Electronic Seals has a fixed structure per Subscriber, as described in the “Naming” [section 3.1](#) above. The LSO account submits a request to issue a certificate, that is, to issue “certificate generation activation secrets” to the SWIFTNet PKI RA using the “Secure Channel” application. As part of preparing the request, the LSO account defines a download password that is used in a later phase of the process. If the Subscriber requires dual authorisation, a second LSO account must confirm this request. The request to issue the “certificate generation activation secrets” must be performed no later than 3 months after the successful completion of the identity validation process (described in [section 3.2.2](#)).

The SWIFTNet PKI RA registers the Subject DN in the PKI, defines the certificate parameters, and configures it to be ready for certification. This results in the generation of “certificate generation activation secrets”, which are made available to the LSO account for secure download – using the download password defined previously.

The LSO account subsequently downloads the certificate generation activation secrets. Further use is described in [section 4.3](#).

The procedures for the enrolment process by the SWIFTNet PKI RA are detailed in SWIFT internal documents.

4.2 Certificate Application Processing

4.2.1 Performing Identification and Authentication Functions

The Subscriber and its LSO accounts are defined as part of the SWIFT network connectivity setup, as described in [section 3.2.2](#). The LSO accounts have a secure communication channel with SWIFT called “Secure Channel”, in which their identity is strongly authenticated.

4.2.2 Approval or Rejection of Certificate Applications

Approval or rejection of applications to a SWIFT Qualified Certificate for Electronic Seals is communicated to the LSO account via the “Secure Channel” application as described in [section 4.1.2](#).

4.2.3 Time to Process Certificate Applications

SWIFTNet PKI RA will process the certificate application on Belgian business days. The notification towards the LSO account that the certificate generation activation secrets are available is sent within the next 5 Belgian business days.

4.3 Certificate Issuance

As described in [section 4.1.2](#), the LSO account receives certificate generation activation secrets after having requested a SWIFT Qualified Certificate for Electronic Seals to the SWIFTNet PKI RA.

As described in [section 3.2.2](#), the Subscriber must have set up a hardware and software configuration that allows connectivity on SWIFTNet. To obtain a SWIFT Qualified Certificate for Electronic Seals, the Subscriber must use this SWIFTNet connectivity, in particular the Key Management Application (KMA) available on the SWIFTNet Link interface.

The KMA generates the public and private key pair on an HSM connected to the SWIFTNet Link. KMA requires the LSO account to supply the certificate generation activation secrets, and sends these together with the public key to the SWIFTNet PKI CA. The exchange between the KMA and the SWIFTNet PKI CA is based on the PKIX-CMP protocol.

The SWIFTNet PKI CA validates the certificate generation activation secrets, and generates the certificate with the certificate parameters provided by the SWIFTNet PKI RA as described in [section 4.1.2](#).

The certificate generation activation secrets remain valid for 180 days, but can only be used once.

4.4 Certificate Acceptance

4.4.1 Conduct Constituting Certificate Acceptance

By using the certificate generation activation secrets in the Key Management Application, the certificate is automatically generated and accepted.

4.4.2 Publication of the Certificate by the CA

The certificate is published by the SWIFTNet PKI CA to the SWIFTNet Directory.

4.4.3 Notification of Certificate Issuance by the CA to Other Entities

Not applicable.

4.5 Key Pair and Certificate Usage

4.5.1 Subscriber Private Key and Certificate Usage

The key pairs associated to SWIFT Qualified Certificates for Electronic Seals are generated and stored in a Hardware Security Module (HSM) by the Subscriber and under its sole control.

Access to the private key in the HSM is protected with a password, which is chosen by the Subscriber and which must be compliant to the password policy imposed by the Key Management Application (see *SWIFT Qualified Certificates for Electronic Seals – Certificate Administration Guide* [\[3\]](#)).

The Subscriber is obligated:

- to cease all use of the private key corresponding to the public key listed in a SWIFT Qualified Certificate for Electronic Seals upon expiration or revocation of that certificate
- to not have the key pair associated with their SWIFT Qualified Certificate for Electronic Seals certified by another TSP, or re-use the key pair for any other purpose than stated in the present *Certificate Policy*
- to only use the key pair associated with their SWIFT Qualified Certificate for Electronic Seals in accordance with any limitations notified to the Subscriber.

4.5.2 Relying Party Public Key and Certificate Usage

Relying Parties should not rely on SWIFT Qualified Certificates for Electronic Seals issued in accordance with the present *Certificate Policy*, unless they have performed the following actions:

- Successfully perform public key operations as a condition of relying on a SWIFT Qualified Certificate for Electronic Seals.
- Validate a certificate by using the SWIFTNet PKI CA's Certificate Revocation Lists (CRLs) (see also [section 4.9.6](#)), and untrust the certificate once it has been revoked or has expired.
- Take all other precautions with regard to the use of the SWIFT Qualified Certificate for Electronic Seals as set out in the present *Certificate Policy* or elsewhere, and rely on a SWIFT Qualified Certificate for Electronic Seals as may be reasonable under the circumstances.
- CRLs are signed by the current SWIFTNet PKI CA root certificate (see [section 1.1.1](#)). Relying parties must ensure they have established trust in the current SWIFTNet PKI CA certificate, available for download here: https://aia.pki.swift.com/swiftnet_root_2019.cer

4.6 Certificate Renewal

Certificate renewal as defined in PKI standards, that is, issuing a new certificate to an existing key pair, is a functionality that is not implemented by the SWIFTNet PKI.

Subscribers who wish to renew their certificates shall also be required to generate new key pairs (known as re-key).

4.7 Certificate Re-key

Re-Key requests are considered to be new certificate requests. The same process applies as described in [sections 4.1](#), [4.2](#), [4.3](#), and [4.4](#).

4.7.1 Circumstance for Certificate Re-key

When the private key corresponding to the SWIFT Qualified Certificate for Electronic Seals is less than 90 days away from expiring ("Valid To" date, as described in [section 7.1](#)), the Subscriber can submit a request for a new SWIFT Qualified Certificate for Electronic Seals, which will be validated, and either rejected or accepted and processed by SWIFTNet PKI RA.

Additionally, in case the certificate has been revoked, the Subscriber can submit a request for a new SWIFT Qualified Certificate for Electronic Seals, which will be validated, and either rejected or accepted and processed by the SWIFTNet PKI RA. Subscribers will be notified of the impending expiration of their certificate one month before its expiration.

4.7.2 Who May Request Certification of a New Public Key?

The same process as for initial certificate application is used ([section 4.1.1](#)).

4.7.3 Processing Certificate Re-keying Requests

The same process as for initial certificate application is used ([section 4.2](#)). As described in [section 3.3](#), identity validation is repeated, which takes additional processing time.

4.7.4 Notification of New Certificate Issuance to Subscriber

The same process as for initial certificate issuance is used ([section 4.3](#)).

4.7.5 Conduct Constituting Acceptance of a Re-keyed Certificate

The same process as for initial certificate acceptance is used ([section 4.4.1](#)).

4.7.6 Publication of the Re-keyed Certificate by the CA

The same process as for initial certificate acceptance is used ([section 4.4.2](#)).

4.7.7 Notification of Certificate Issuance by the CA to Other Entities

The same process as for initial certificate issuance is used ([section 4.4.3](#)).

4.8 Certificate Modification

Certificate modification is not implemented by the SWIFTNet PKI.

4.9 Certificate Revocation and Suspension

4.9.1 Circumstances for Revocation

SWIFT revokes SWIFT Qualified Certificates for Electronic Seals if any of the following circumstances occurs:

- the Subscriber to which the SWIFT Qualified Certificate for Electronic Seals is issued has duly requested its revocation. For more information about the circumstances in which the Subscriber has an obligation to request an immediate revocation of a SWIFT Qualified Certificate for Electronic Seal, see [section 9.6](#);
- SWIFT is informed of or, in SWIFT's reasonable opinion, any of the following facts or circumstances occurs:
 - the registration information was wrong or falsified;
 - the information in the certificate is no longer correct;
 - the confidentiality of the private key was compromised;
 - the Subscriber stops existing;
 - the certificate is no longer compliant with the CP under which it was issued;
- the revocation is required by law or regulation, or pursuant to a binding and enforceable court order from a court;
- SWIFT stops its Trust Service Provider activities without handing over to another CA with similar quality and security levels (see [section 4.9.6](#));
- any of the algorithms, or associated parameters, used by SWIFT or the Subscribers becomes insufficient for its remaining intended usage;
- if SWIFT's CA private key is compromised and as further set forth in SWIFT's incident response plan (see [section 5.7](#));
- in the circumstances set out in [section 4.11](#).

The revocation process is irreversible. Once revoked, the certificate cannot be unrevoked.

4.9.2 Who Can Request Revocation?

An LSO account can request revocation of any certificate issued to the Subscriber it belongs to. The Subscriber must ensure it appoints a sufficient number of LSO accounts, and designates new or substitute LSO accounts over time, to ensure at least two LSO accounts are available at all times.

4.9.3 Procedure for Revocation Request

The LSO account, as registered with SWIFT and entitled by the Subscriber to which it belongs to manage its SWIFT Qualified Certificate(s) for Electronic Seals, uses the “Secure Channel” application to communicate with the SWIFTNet PKI RA, and to request a revocation for the SWIFT Qualified Certificate for Electronic Seals belonging to this Subscriber. The SWIFTNet PKI RA receives the request and revokes the certificate.

Following the revocation of the certificate, notification of revocation is provided to the LSO via the Secure Channel application.

In case SWIFT as Trust Service Provider revokes a SWIFT Qualified Certificate for Electronic Seals other than pursuant to the request of the Subscriber, notification of the revocation is provided to the LSO(s) of the affected Subscriber in writing (typically, by email).

4.9.4 Revocation Request Grace Period

There is no grace period, revocation is immediate.

Temporary suspension of certificates is not possible.

The revocation process is irreversible. Once revoked, the certificate cannot be unrevoked.

4.9.5 Time within which CA Must Process the Revocation Request

Revocation processing is performed by the SWIFTNet PKI RA, within 2 hours of reception of the revocation request.

4.9.6 Revocation Checking Requirement for Relying Parties

Relying Parties are required to check revocation status of certificates.

4.9.7 CRL Issuance Frequency

The CRL is issued immediately after a certificate revocation.

If there is no revocation, then the CRLs are refreshed before the CRL ‘Next Update’ value. For partitioned CRLs, available in SWIFTNet Directory, Next Update = This Update + 25 hours, and for the combined CRL, available on <https://www2.swift.com/pkirepository/SWIFTCA1.crl> Next Update = This Update + 72 hours.

4.9.8 Maximum Latency for CRLs

The new CRL(s) will be added to the SWIFTNet Directory immediately following creation, and will be available for Relying Parties to download from the SWIFTNet Directory within 7 minutes after its creation.

The combined CRL available on <https://www2.swift.com/pkirepository/SWIFTCA1.crl> is published every 24 hours.

4.9.9 Online Revocation/Status Checking Availability

Revocation status can be checked by consulting the CRL. CRLs are available to the Relying Parties on the SWIFTNet Directory, and on <https://www2.swift.com/pkirepository/SWIFTCA1.crl>

CRLs are signed by the current SWIFTNet PKI CA root certificate (see [section 1.1.1](#)). Relying parties must ensure they have established trust in the current SWIFTNet PKI CA certificate, available for download here: https://aia.pki.swift.com/swiftnet_root_2019.cer

OCSP is not supported by the SWIFTNet PKI CA.

4.9.10 Online Revocation Checking Requirements

The SWIFTNet Link software is required to access the SWIFTNet Directory for accessing the CRLs. The combined CRL on <https://www2.swift.com/pkirepository/SWIFTCA1.crl> is publicly available on the Internet.

CRLs are signed by the current SWIFTNet PKI CA root certificate (see [section 1.1.1](#)). Relying parties must ensure they have established trust in the current SWIFTNet PKI CA certificate, available for download here: https://aia.pki.swift.com/swiftnet_root_2019.cer

OCSP is not supported by the SWIFTNet PKI CA.

4.9.11 Other Forms of Revocation Advertisements Available

Not applicable.

4.9.12 Special Requirements regarding Key Compromise

Not specified.

4.9.13 Certificate Suspension

Certificate suspension is not implemented by the SWIFTNet PKI.

4.10 Certificate Status Services

4.10.1 Operational Characteristics

The Relying Parties are those persons who are acting on a SWIFT Qualified Certificate for Electronic Seals to verify the advanced electronic seal of a Subscriber.

Relying Parties that are SWIFT users can (re-)use their existing SWIFTNet connectivity to access the SWIFTNet Directory (see [section 3.2.2](#)). The SWIFTNet Link software is a mandatory component of this configuration, and is used to access the SWIFTNet Directory for accessing the CRLs.

Relying Parties that are not SWIFT users can access the combined CRL through the Internet on <https://www2.swift.com/pkirepository/SWIFTCA1.crl>

CRLs are signed by the current SWIFTNet PKI CA root certificate (see [section 1.1.1](#)). Relying parties must ensure they have established trust in the current SWIFTNet PKI CA certificate, available for download here: https://aia.pki.swift.com/swiftnet_root_2019.cer

4.10.2 Service Availability

Resilience of the SWIFTNet systems is based on recovery scenarios that include fast service restoration if a disaster affects a SWIFT operating centre. The SWIFTNet systems are run at multiple operating centres located on geographically distributed locations. SWIFT has designed the operating centre environments to eliminate single points of failure. Each operating centre is designed to carry the whole of SWIFT's normal business with full local redundancy available. SWIFT has designed all network connections between the operating centres to have at least two separate routes that can carry the full traffic load.

SWIFT organises planned maintenance, and business continuity testing, which occur during maintenance periods. These maintenance windows and test windows begin on Saturday at 16:00 GMT. During the maintenance windows, SWIFTNet PKI is subject to possible interruptions.

The levels of service that this *Certificate Policy* specifies assume normal operating conditions. These include resilient operations during most single-component failure scenarios within the active and standby SWIFT operating centres. The SWIFTNet design is resilient, and can handle many anomalous events without impact to customer activities. However, under certain, very unlikely, disaster scenarios, SWIFT may be unable to meet these levels of service. The potential for data loss also exists in a few of these rare circumstances.

The availability of the repository that includes the combined CRL is designed to exceed 99.8% of SWIFTNet business hours - defined as 24 hours per day, seven days per week, excluding planned maintenance periods as indicated on www.swift.com

4.11 End of Subscription

The Subscriber has the right to terminate its subscription to SWIFT's Qualified Certificates for Electronic Seals offering in accordance with the relevant provisions of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

If the Subscriber loses its status of SWIFT user, service bureau, SWIFT registered provider, L2BA application provider or other registered customer (as the case may be) for any reason, then its subscription to SWIFT's Qualified Certificates for Electronic Seals offering automatically and immediately terminates without prior notice and without prior court intervention.

Termination of the Subscriber's subscription to SWIFT's Qualified Certificates for Electronic Seals offering for any reason will automatically cause the revocation of all its SWIFT Qualified Certificates for Electronic Seals.

4.12 Key Escrow and Recovery

Key escrow is not implemented for SWIFT Qualified Certificates for Electronic Seals.

5 FACILITY, MANAGEMENT, AND OPERATIONAL CONTROLS

5.1 Physical Controls

Physical security controls are compliant with the SWIFT physical security policy, and are defined in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [\[1\]](#), according to the following themes:

- Site location and construction
- Physical access
- Power and air conditioning
- Water exposure
- Fire prevention and protection
- Media storage
- Waste disposal
- Off-site backup

5.2 Procedural Controls

Procedural security controls around the SWIFTNet PKI CA are defined in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [\[1\]](#) and related documentation. The following themes are included:

- Trusted roles
- Number of persons required per task
- Identification and authentication for each role
- Roles requiring separation of duties

5.3 Personnel Controls

Personnel security controls are compliant with the SWIFT HR Security policy, and are defined in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [\[1\]](#). The following themes are included:

- Qualifications, experience, and clearance requirements
- Background check procedures
- Training requirements
- Retraining frequency and requirements
- Job rotation frequency and sequence
- Sanctions for unauthorised actions
- Independent contractor requirements
- Documentation supplied to personnel

5.4 Audit Logging Procedures

Audit logging procedures are defined in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [1], according to the following themes:

- Types of events recorded
- Frequency of processing log
- Retention period for audit log
- Protection of audit log
- Audit log backup procedures

5.5 Records Archival

Records related to certificate issuance for SWIFT Qualified Certificates for Electronic Seals are archived for 12 years as from the expiry or revocation date of the certificate (whichever occurs first). Records related to changes to the status of certificates are archived for 24 years as from the certificate's expiry or revocation date (whichever occurs first). After this 12 year or, as the case may be, 24 year retention period, SWIFT deletes these records as per a regular housekeeping process except that related technical logs may be preserved for a longer period of time if their deletion could, in SWIFT's reasonable opinion, affect the integrity of other information or data related to records within the applicable retention period.

Archive copies of certificates and CRLs will be retained and protected in electronic form for at least 24 years as from the certificate's expiry or revocation date (whichever occurs first) and, thereafter, for an indefinite term. These certificates and CRLs don't contain personal data.

For more information about records retention, see the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [1].

5.6 Key Changeover

Not applicable. SWIFT Qualified Certificates for Electronic Seals will be issued with a validity time within the validity time of the CA root certificate.

5.7 Compromise and Disaster Recovery

SWIFT maintains incident and crisis management procedures, and full Business Continuity Management processes. SWIFTNet PKI and revocation status information services are a part of these processes, and details are described in SWIFT internal documents.

SWIFT Qualified Certificates for Electronic Seals revocation status information will remain available in the repositories documented in [section 2](#). In case the Business Continuity Management process requires this to be changed, this shall be documented in an updated version of the present *Certificate Policy* published on <https://www.swift.com/pkirepository>

5.8 CA or RA Termination

In case SWIFT decides to terminate its Qualified Certificate for Electronic Seals offering, the following procedures will be executed, in accordance with the *SWIFTNet PKI Qualified Certificates for Electronic Seals – Termination Plan*:

- When possible, transfer the Qualified Certificate for Electronic Seals service activities to a Trust Service Provider that can offer the same service levels as SWIFT.

- Inform Subscribers, Relying Parties, and the supervisory body within a reasonable time.
- Revoke all SWIFT Qualified Certificates for Electronic Seals 2 months after having notified the Subscribers.
- Maintain an archive of all events, certificates, certificate status information, for as long as required, and inform the Subscribers of the measures taken in this regard.
- Decommission specific facilities and configuration for the SWIFTNet PKI CA to issue SWIFT Qualified Certificates for Electronic Seals.
- In case SWIFT is required to terminate its Qualified Certificate for Electronic Seals offering for reasons outside its control, it will inform the supervisory body immediately, revoke all SWIFT Qualified Certificates for Electronic Seals, and inform the Subscribers how it will maintain an archive of all events, certificates, certificate status information, for as long as required.
- SWIFT Qualified Certificates for Electronic Seals revocation status information will remain available in the repositories documented in [section 2](#) for a minimum period of 6 months. Transfer of the required archived information to a third party under contract with SWIFT shall be documented in an updated version of the present *Certificate Policy* published on <https://www.swift.com/pkirepository> as part of the termination notification plan (ref. *SWIFTNet PKI Qualified Certificates for Electronic Seals – Termination Plan*).

6 TECHNICAL SECURITY CONTROLS

6.1 Key Pair Generation and Installation

6.1.1 Key Pair Generation

CA key pair generation is described in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [1], and is strictly organised and audited through PKI ceremonies.

Subscriber key pairs are generated inside an HSM, controlled by the KMA application.

6.1.2 Private Key Delivery to Subscriber

Not applicable: the private key is generated inside the HSM and is not exportable in clear text form.

6.1.3 Public Key Delivery to Certificate Issuer

The public key to be certified is sent in a KMA application request to the SWIFTNet PKI CA, inside a secure SWIFTNet session set up between Subscriber and SWIFT.

6.1.4 CA Public Key Delivery to Relying Parties

The current and legacy SWIFTNet PKI CA public keys are obtained automatically by the KMA (see [section 1.1.1](#)) application from the SWIFTNet PKI CA, inside a secure SWIFTNet session set up between Subscriber and SWIFT. Additionally, the SWIFTNet PKI CA public key certificates are available online on <https://www.swift.com/pkirepository>

6.1.5 Key Sizes

The key size of the SWIFTNet PKI CA key pair is 4096-bit RSA.

The key size of all entity certificates is 2048-bit RSA.

The key size of the legacy SWIFTNet PKI CA key pair is 2048-bit RSA (see [section 1.1.1](#)).

6.1.6 Public Key Parameter Generation and Quality Checking

All public key parameters are set by the SWIFTNet PKI RA. SWIFTNet PKI RA deploys procedures that implement quality control.

6.1.7 Key Usage Purposes (as per X.509 v3 Key Usage Field)

Refer to [section 7.1](#).

6.2 Private Key Protection and Cryptographic Module Engineering Controls

6.2.1 Cryptographic Module Standards and Controls

The CA private key is generated and stored on a FIPS 140-2 level 3 HSM.

Subscriber private keys are generated and stored on an HSM that complies with minimally FIPS 140-2 level 2, provided by SWIFT (see [section 1.3.5](#)).

6.2.2 Private Key (n out of m) Multi-person Control

CA private key procedures are put in place to enforce that at least three representatives from different organisational units within SWIFT are required to perform security-critical functions.

Subscriber HSMs of the type "LAN HSM" shall offer functionality that can be used by the Subscriber to implement Private Key Multi-person Control.

6.2.3 Private Key Escrow

No private key escrow functionality is implemented.

6.2.4 Private Key Back-up

There are no functions that allow the private key to be exported from the HSM, either in its entirety or in parts, in clear text form.

6.2.5 Private Key Archival

Subscriber private signature or authentication keys shall not be archived.

6.2.6 Private Key Transfer into or from a Cryptographic Module

For the CA private key, there is a special function that allows the HSM, including all keys and other data that is stored therein, to be securely "cloned". This is one of the security-critical functions noted in [section 6.2.2](#) (and controlled as such).

For Subscriber HSMs, functionality shall not be available to allow private key transfer into or from a cryptographic module without assurance on access control, confidentiality, and traceability.

6.2.7 Private Key Storage on Cryptographic Module

The SWIFTNet PKI CA private signing key is stored in local HSMs that meet the FIPS 140-2 level 3 standard.

Subscriber private keys are generated and stored on an HSM that complies with minimally FIPS 140-2 level 2, provided by SWIFT (see [section 1.3.5](#)).

6.2.8 Method of Activating Private Key

Authentication is required for activation of any SWIFTNet private key.

6.2.9 Method of Deactivating Private Key

Not specified.

6.2.10 Method of Destroying Private Key

There is a special function that allows the secure destruction of the information inside the HSM, including all keys and other data that is stored therein.

For the CA private key, this is one of the security-critical functions noted in [section 6.2.2](#) (and controlled as such). All copies of the CA private signing keys shall be destroyed at the end of their life cycle.

Subscriber private keys are destroyed when the corresponding account is deleted.

6.2.11 Cryptographic Module Rating

The SWIFTNet PKI CA uses an HSM that is compliant with FIPS 140-2 level 3.

Subscribers use HSMs that comply with minimally FIPS 140-2 level 2.

6.3 Other Aspects of Key Pair Management

6.3.1 Public Key Archival

Not specified.

6.3.2 Certificate Operational Periods and Key Pair Usage Periods

Refer to [section 7.1](#).

6.4 Activation Data

Activation data for the CA private key is handled as described in [section 6.2.2](#).

Activation data for SWIFT Qualified Certificates for Electronic Seals are handled according to SWIFTNet security practices.

6.5 Computer Security Controls

Computer security controls are compliant with the SWIFT security policies. Additional details are included in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [\[1\]](#).

6.6 Lifecycle Technical Controls

Lifecycle technical security controls are compliant with the SWIFT security policies. Additional details are included in the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement* [\[1\]](#).

6.7 Network Security Controls

Network security controls are compliant to the SWIFT security policies.

6.8 Time-stamping

Not specified.

7 CERTIFICATE, CRL, AND OCSP PROFILES

7.1 Certificate Profile

Remark: The following fields of the certificate format X.509 version 3 are not used in the SWIFTNet PKI:

- Issuer unique identifier
- Subject unique identifier

Field	Value	Detailed value (or Example)	Description/Comments
Version	v3	2	Corresponds to x509 v3
Serial Number		45 a6 b6 32	Serial number of certificate in CA A unique certificate serial number within the SWIFTNet PKI CA security domains, generated by the SWIFTNet PKI CA when a new certificate is created
Signature algorithm	sha256WithRSAEncryption	1.2.840.113549.1.1.11	Identifier for the algorithm used by the SWIFTNet PKI CA to sign the certificate
Issuer	o=swift		The full distinguished name of the SWIFTNet PKI CA issuing the certificate
Valid from		Sep 25 15:57:58 2019 GMT	Certificate validity period: maximum 2 years for SWIFT Qualified Certificates for Electronic Seals. The "Valid to" date is set by SWIFTNet PKI RA as 2 years after the date of defining the certificate parameters (see section 4.1.2). The "Valid from" date is set by the SWIFTNet PKI CA as the date of certificate generation (see section 4.3). The certificate generation takes place maximum
Valid to		Sep 25 16:27:58 2021 GMT	

Field	Value	Detailed value (or Example)	Description/Comments
			180 days after the certificate generation activation secrets are issued.
Subject	cn=%<number>,cn=Qualified Enterprise,organizationIdentifier=<organization identifier>,o=<BIC>,o=swift or cn=Qualified Enterprise,organizationIdentifier=<organization identifier>,o=<BIC>,o=swift	cn=%001,cn=Qualified Enterprise,organizationIdentifier=VATBE-0413330856,o=SWHQBEBQ,o=swift cn=Qualified Enterprise,organizationIdentifier=VATBE-0413330856,o=SWHQBEBQ,o=swift	<number> is a numeric string with a maximum length of 8 digits (each with value 0 to 9). The cn=%<number> part is optional. <BIC> is an identifier for the certificate Subscriber identity, the ISO-9362 Business Identifier Code <organizationIdentifier> is described in section 3.1 .
Public key	RSA public key, 2048 bit Modulus = 2048 bit, Public Exponent = 65537		
Extensions	See table below		

Remark: The following extensions are not used in the SWIFTNet PKI:

- Policy Constraints
- Policy Qualifiers. SWIFT Qualified Certificates for Electronic Seals don't contain a URI (Uniform Resource Identifier) to the Certification Practice Statement document, or a UserNotice.

Extension name	Extension OID	Value	Detailed value (or Example)	Critical	Description/Comments
KeyUsage	2.5.29.15	Digital signature, Non-Repudiation		True	
IssuerAltName	2.5.29.18	cn=SWIFTNet PKI CA,organizationIdentifier=VATBE-0413330856,o=S.W.I.F.T. SCRL,c=BE		False	Indicates the name of the organisation as stated in the official records, and the country in which it is established.

Extension name	Extension OID	Value	Detailed value (or Example)	Critical	Description/ Comments
SubjectDirectoryAttributes	2.5.29.9			False	Pointer to the attribute certificate describing the password policies defined on the CA.
CertificatePolicies	2.5.29.32	1.3.21.6.3.10.200.7		False	SWIFT Qualified Certificate for Electronic Seals.
qcStatements	1.3.6.1.5.5.7.1.3	id-etsi-qcs 1 and id-etsi-qcs-QcType 2	0.4.0.1862.1.1 and 0.4.0.1862.1.6.2	False	ETSI EN 319412-5
CRLDistributionPoints	2.5.29.31	DirName=/o=SWIFT/cn=CRLnnn URL=https://www2.swift.com/pkirepository/SWIFTCAL1.crl	cn=CRL167,o=swift URL=https://www2.swift.com/pkirepository/SWIFTCAL1.crl	False	Distinguished Name (DN) where the revocation information about the certificate will be published in the SWIFTNet Directory. The combined CRL is additionally available on https://www2.swift.com/pkirepository/SWIFTCAL1.crl
PrivateKeyUsagePeriod	2.5.29.16	NotBefore, NotAfter have same values as "Valid from" and "Valid to"		False	Private key is valid for 100% of the corresponding certificate lifetime.
AuthorityKeyIdentifier	2.5.29.35	160-bit key identifier		False	Helps identify the correct CA public key. It is typically a SHA1 digest of the CA public key.
SubjectKeyIdentifier	2.5.29.14	160-bit key identifier		False	Helps identify the correct subject public key. It is typically a SHA1 digest of the public key.
BasicConstraints	2.5.29.19	CA=False PathLengthConstraint=None		False	Indicates whether Subject is a CA or not. Indicates whether relying parties should limit the number of certificates in a trust path.
EntrustVersInfo	1.2.840.113533.7.65.0		V8.2	False	Indicates Entrust version.

Extension name	Extension OID	Value	Detailed value (or Example)	Critical	Description/ Comments
AuthorityInformationAccess	1.3.6.1.5.5.7.1.1	https://aia.pki.swift.com/swiftnet_root_2019.cer		False	Provides the location at which the issuing CA certificate can be obtained.

SWIFT Qualified Certificates for Electronic Seals issued prior to March 2020 have the following extensions:

Extension name	Extension OID	Value	Detailed value (or Example)	Critical	Description/ Comments	Indicates legacy extension (see above table for current)
KeyUsage	2.5.29.15	Digital signature, Non-Repudiation		True		
IssuerAltName	2.5.29.18	cn=SWIFTNet PKI CA, organizationIdentifier=VATBE-0413330856, o=S.W.I.F.T. SCRL, c=BE		False	Indicates the name of the organisation as stated in the official records, and the country in which it is established.	
SubjectDirectoryAttributes	2.5.29.9			False	Pointer to the attribute certificate describing the password policies defined on the CA.	
CertificatePolicies	2.5.29.32	1.3.21.6.3.10.200.7		False	SWIFT Qualified Certificate for Electronic Seals.	
qcStatements	1.3.6.1.5.5.7.1.3	id-etsi-qcs 1 and id-etsi-qcs-QcType 2	0.4.0.1862.1.1 and 0.4.0.1862.1.6.2	False	ETSI EN 319412-5	
CRLDistributionPoints	2.5.29.31	DirName=/o=SWIFT/cn=CRLnnn URL=https://www2.swift.com/pkirepository/SWIFTCA.crl	cn=CRL167, o=swift URL=https://www2.swift.com/pkirepository/SWIFTCA.crl	False	Distinguished Name (DN) where the revocation information about the certificate will be published in the SWIFTNet Directory.	Legacy Extension

					The combined CRL is additionally available on https://www2.swift.com/pkir/repository/SWIFTCA.crl	
PrivateKey Usage Period	2.5.29.16	NotBefore, NotAfter have same values as "Valid from" and "Valid to"		False	Private key is valid for 100% of the corresponding certificate lifetime.	
AuthorityKeyIdentifier	2.5.29.35	160-bit key identifier	3e:30:b3:3b:35:97:57:ff:f1:40:db:1b:45:01:38:2e:15:a7:9e:b2	False	Helps identify the correct CA public key. It is typically a SHA1 digest of the CA public key.	Legacy Extension
SubjectKeyIdentifier	2.5.29.14	160-bit key identifier		False	Helps identify the correct subject public key. It is typically a SHA1 digest of the public key.	
BasicConstraints	2.5.29.19	CA=False PathLengthConstraint=None		False	Indicates whether Subject is a CA or not. Indicates whether relying parties should limit the number of certificates in a trust path.	
EntrustVersionInfo	1.2.840.113533.7.65.0		V8.1	False	Indicates Entrust version.	Legacy Extension
AuthorityInformationAccess	1.3.6.1.5.5.7.1.1	https://www2.swift.com/syndres/certificates/swiftnet_root.der		False	Provides the location at which the issuing CA certificate can be obtained.	Legacy Extension

7.2 CRL Profile

7.2.1 Partitioned CRL

The following fields of the X.509 version 2 CRL format are used in the SWIFTNet PKI.

Field	Value	Detailed value (or Example)	Description/Comments
Version	v2	1	Corresponds to x509 v2 CRL profile.
Signature algorithm	sha256WithRSAEncryption	1.2.840.113549.1.1.11	Identifier for the algorithm used by the SWIFTNet PKI CA to sign the CRL.
Issuer	o=swift		The full distinguished name of the SWIFTNet PKI CA issuing the CRL.
Last (This) Update		May 11 15:57:58 2019 GMT	Issue date of this CRL.
Next Update		May 12 16:57:58 2019 GMT	Next CRL update will be issued no later than the indicated date.
Revoked Certificates			If present, it is a non-empty list of revoked certificates. Each element in the list is also known as a CRL-entry.
Serial Number		4B 04 53 AF	Certificate serial number.
Revocation Date		Mar 22 17:59:09 2019 GMT	Revocation date and time.
Extensions	See table below		

CRLs issued by the SWIFTNet PKI CA are X.509 version 2 CRLs.

A number of X.509 version 2 CRL and CRL entry extensions are used in the SWIFTNet PKI. These are outlined below. The X.509 version 2 CRL and CRL entry extensions that are never present in CRLs issued by the SWIFTNet PKI CA, are also outlined below.

The following CRL and CRL entry extensions are used in this PKI.

CRL Extension name	Value	Detailed value (or Example)	Critical	Description/ Comments
IssuingDistribution Point		cn=CRL624,o=SWIFT	True	Identifies the CRL distribution point.
CRL Number			False	Monotonically increasing sequence number for a given CRL scope and CRL issuer.
AuthorityKeyIdentifier	160-bit key identifier		False	Identifies the public key corresponding to the private key used to sign the CRL. It is typically a SHA1 digest of the public key. The current SWIFTNet PKI CA key is used to sign the partitioned CRLs (see section 1.1.1).
Issuer alternative name				Not used.

CRL Extension name	Value	Detailed value (or Example)	Critical	Description/ Comments
Delta CRL indicator				Not used.
Delta CRL Distribution Point (Freshest CRL)				Not used.

CRL Entry Extension name	Value	Detailed value (or Example)	Critical	Description/ Comments
CRL Reason Code		For example Key Compromise	False	Reason for the certificate revocation.
Invalidity Date		Mar 22 17:59:09 2019 GMT	False	The date on which it is known or suspected that the private key was compromised or that the certificate otherwise became invalid. For SWIFTNet PKI, this is identical to the Revocation date and time.
Hold instruction code				Not used.
Certificate issuer				Not used.

7.2.2 Combined CRL

The following fields of the X.509 version 2 CRL format are used in the SWIFTNet PKI.

Field	Value	Detailed value (or Example)	Description/Comments
Version	v2	1	Corresponds to x509 v2 CRL profile.
Signature algorithm	sha256WithRSAEncryption	1.2.840.113549.1.1.11	Identifier for the algorithm used by the SWIFTNet PKI CA to sign the CRL.
Issuer	o=swift		The full distinguished name of the SWIFTNet PKI CA issuing the CRL.
Last (This) Update		May 11 15:57:58 2019 GMT	Issue date of this CRL.
Next Update		May 14 15:57:58 2019 GMT	Next CRL update will be issued no later than the indicated date.
Revoked Certificates			If present, it is a non-empty list of revoked certificates. Each element in the list is also known as a CRL-entry.
Serial Number		4B 04 53 AF	Certificate serial number.

Field	Value	Detailed value (or Example)	Description/Comments
Revocation Date		Mar 22 17:59:09 2019 GMT	Revocation date and time.
Extensions	See table below		

CRLs issued by the SWIFTNet PKI CA are X.509 version 2 CRLs.

A number of X.509 version 2 CRL and CRL entry extensions are used in the SWIFTNet PKI. These are outlined below. The X.509 version 2 CRL and CRL entry extensions that are never present in CRLs issued by the SWIFTNet PKI CA, are also outlined below.

The following CRL and CRL entry extensions are used in this PKI.

CRL Extension name	Value	Detailed value (or Example)	Critical	Description/Comments
CRL Number			False	Monotonically increasing sequence number for a given CRL scope and CRL issuer.
AuthorityKeyIdentifier	160-bit key identifier		False	Identifies the public key corresponding to the private key used to sign the CRL. It is typically a SHA1 digest of the public key. The current SWIFTNet PKI CA key is used to sign the partitioned CRLs (see section 1.1.1).
IssuingDistribution Point				Not used.
Issuer alternative name				Not used.
Delta CRL indicator				Not used.
Delta CRL Distribution Point (Freshest CRL)				Not used.
ExpiredCertsOnCrl (Extension OID 2.5.29.60)	2016080100000Z	1 August 2016	False	The date on which the CRL starts to keep revocation status information for expired certificates.

CRL Entry Extension name	Value	Detailed value (or Example)	Critical	Description/Comments
CRL Reason Code		For example Key Compromise	False	Reason for the certificate revocation.
Invalidity Date		Mar 22 17:59:09 2019 GMT	False	The date on which it is known or suspected that the private key was compromised or that the certificate otherwise became invalid. For SWIFTNet PKI, this is identical to the Revocation date and time.
Hold instruction code				Not used.
Certificate issuer				Not used.

7.3 OCSP Profile

Not applicable.

8 COMPLIANCE AUDIT AND OTHER ASSESSMENTS

Complementing the mandatory conformity assessment to be conducted at least every 24 months pursuant to the eIDAS Regulation, SWIFT's Internal Audit team reviews the certificate lifecycle processes, as well as the physical and logical security measures protecting the Certification Authority (CA) and related systems, on a rotational basis.

8.1 Frequency or Circumstances of Assessment

Under its current mandate, Internal Audit operates on a three-year cycle. This means that an audit entity will be audited at least once every three years, or more frequently depending on the business criticality as defined by Internal Audit and SWIFT Management. The business criticality is reconfirmed at the start of every assessment.

SWIFT Management can always request a specific review in addition to the normal rotational coverage described above.

The certificate lifecycle processes, as well as the physical and logical security measures protecting the Certification Authority (CA) and related systems, are generic for all certificates produced by SWIFT, which are part of SWIFT's annual Third Party Assurance report which includes the opinion of the external security auditor on the adequacy and effectiveness of the controls.

8.2 Identity and Qualifications of Assessor

SWIFT's internal audit is an assurance and advisory activity designed to independently and objectively review, assess, and report on SWIFT's risk and control functions and environment on an ongoing basis. The team has multiple technology experts that have adequate skills to perform the assessment. As a baseline, all technology experts have the professional accreditation awarded by ISACA – Certified IT Systems Auditor (CISA) and many have additional professional accreditations such as ISC²'s Certified Information Systems Security Professional (CISSP).

The Chief Auditor can elect to assign this work partly or entirely to a third party. In this case, the third party will have similar or better qualifications and the report will still be issued under the responsibility of the Chief Auditor. All other stipulations in this section will continue to apply.

8.3 Assessor's Relationship to Assessed Entity

The Internal Audit team is independent from SWIFT's Management and the Chief Auditor has a direct reporting line to the Chairman of SWIFT's Audit & Finance Committee (as well as to SWIFT's Chief Executive Officer). The Internal Audit Charter provides for numerous safeguards that ensure continued independence for the Internal Audit team.

8.4 Topics Covered by Assessment

The scope of Internal Audit covers SWIFT operations worldwide (with exception of the activities of the SWIFT India Joint venture). Therefore, coverage includes certificate lifecycle processes, as well as the physical and logical security measures protecting the Certification Authority (CA) and related systems.

8.5 Actions Taken as a Result of Deficiency

Issues and findings resulting from the Internal Audit reviews are reported to Management. The final audit reports include the issues and findings as well as the agreed corrective action plan and target date for resolution. The issues and findings are tracked until resolution by Internal Audit.

8.6 Communication of Results

The reports of the audits are for SWIFT Management only and are not disclosed to third parties unless in support of the mandatory supervision audits as part of the supervisory body's processes, or other SWIFT assurance efforts for which the work performed is relevant (any other exceptions to this distribution policy will have to be approved by the Chief Auditor). The certificate lifecycle processes, as well as the physical and logical security measures protecting the Certification Authority (CA) and related systems, are generic for all certificates produced by SWIFT, these are part of SWIFT's annual Third Party Assurance report which includes the opinion of the external security auditor on the adequacy and effectiveness of the controls. The Third Party Assurance report is available to all registered users of SWIFT.

9 OTHER BUSINESS AND LEGAL MATTERS

The *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* [\[4\]](#) constitute the main set of SWIFT standard terms and conditions for the provision and use of SWIFT's Qualified Certificates for Electronic Seals offering. For example, they provide general information about the conditions of use of SWIFT Qualified Certificates for Electronic Seals, the rights and obligations of SWIFT, the Subscribers and Relying Parties, including the duration and termination conditions, their liability, the claim process, or the applicable law and jurisdiction.

If and to the extent that SWIFT's Qualified Certificates for Electronic Seals offering is used in conjunction with other SWIFT services and products, the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* must be read together with the terms and conditions governing the provision and use of these other SWIFT services and products.

The *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* apply to each paper-based or electronic form or other contractual arrangement executed by the Subscriber to subscribe to SWIFT's Qualified Certificates for Electronic Seals offering. If the Relying Party has not executed any such form or contractual arrangement, it shall be deemed to have tacitly accepted the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* by relying or otherwise acting upon a SWIFT Qualified Certificate for Electronic Seals. The integrity of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* posted online is assured by electronic signature. Both the current version, as well as previous versions, are made available to Subscribers.

The paper-based or electronic form or other contractual arrangement executed by the Subscriber or Relying Party and the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*, together with this *Certificate Policy* and the *SWIFT Qualified Certificates for Electronic Seals – Certification Practice Statement ("CPS")* which are incorporated in the *SWIFT Qualified Certificate for Electronic Seals – Terms and Conditions* by reference, contains the entire agreement and understanding between SWIFT and the Subscriber and/or Relying Party for the provision and use of SWIFT Qualified Certificates for Electronic Seals (the "Qualified Certificates for Electronic Seals Agreement"). It supersedes and cancels all prior negotiations, representations, proposals, statements, agreements and undertakings, written or oral, relating to the provision or the use of SWIFT Qualified Certificates for Electronic Seals.

The sections below provide useful information about certain terms and conditions governing the provision or use of SWIFT's Qualified Certificates for Electronic Seals offering, as may be set out in more detail elsewhere in the Qualified Certificates for Electronic Seals Agreement. Nothing in these sections shall be interpreted or construed as granting any rights or imposing any obligations in addition to those set out in the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*. In case of any inconsistency between the sections below and the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*, the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* shall prevail over any contrary terms and conditions set out in the sections below.

9.1 Fees

The Subscriber and/or Relying Party must pay to SWIFT all charges and fees (if any) applicable to them for the provision or use of SWIFT's Qualified Certificates for Electronic Seals offering.

These charges and fees, and related invoicing and payment terms and conditions, are as notified by SWIFT from time to time.

For more information, see clause 7 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.2 Financial Responsibility

SWIFT shall monitor on a regular basis that it maintains adequate resources and insurance coverage to meet its obligations regarding the provision and use of SWIFT's Qualified Certificate for Electronic Seals offering.

9.3 Confidentiality of Business Information

The obligations of confidence of SWIFT, Subscribers and Relying Parties in respect of confidential information obtained in connection with the provision or use of SWIFT's Qualified Certificates for Electronic Seals offering are as set out in this *Certificate Policy* and elsewhere in the Qualified Certificates for Electronic Seals Agreement.

Examples of confidential business information include (without limitation):

- the Subscriber's non-public information supplied to SWIFT at the time of its subscription (other than any information that is published in a SWIFT Qualified Certificate for Electronic Seals)
- the Subscriber's or Relying Parties' non-public information supplied to SWIFT in support requests (other than any information that is published in a SWIFT Qualified Certificate for Electronic Seals)
- the private key(s) of SWIFT Qualified Certificates for Electronic Seals

For the avoidance of any doubt, the following information is not considered as confidential:

- the information published in a SWIFT Qualified Certificate for Electronic Seals
- the revocation records of a SWIFT Qualified Certificate for Electronic Seals
- this *Certificate Policy* or the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*

For more information, see clause 11 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.4 Privacy of Business Information

SWIFT processes personal data (as defined in the [SWIFT Personal Data Protection Policy](#)) collected:

- a) by SWIFT for purposes relating to the provision of SWIFT services and products, including SWIFT's Qualified Certificates for Electronic Seals offering, or relating to SWIFT governance or other purposes set out in the [SWIFT Personal Data Protection Policy \[2\]](#) (for example, contact details of or secrets used to authenticate employees, security officers, or other representatives of a Subscriber or Relying Party)
- b) by a Subscriber or Relying Party and supplied to SWIFT as part of the Subscriber's or Relying Party's use of SWIFT's Qualified Certificates for Electronic Seals offering (for example, personal data contained in certificates that the Subscriber requested SWIFT to issue).

The rights and obligations of the parties in each case are set out in the [SWIFT Personal Data Protection Policy \[2\]](#) in effect from time to time as published on www.swift.com, such as any notification obligation SWIFT may have in case of unauthorised disclosure of personal data supplied by the Subscriber or Relying Party.

For more information, see clause 10 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.5 Intellectual Property Rights

Any and all rights (including title, ownership rights, database rights, and any other intellectual property rights) in SWIFT's Qualified Certificates for Electronic Seals offering, and documentation or other materials developed or supplied in connection with that offering, including any associated processes or any derivative works, are and will remain the sole and exclusive property of SWIFT or its licensors.

No rights are granted by SWIFT in respect of SWIFT's Qualified Certificates for Electronic Seals offering, and documentation or other materials developed or supplied in connection with that offering, other than those expressly granted under this *Certificate Policy* or elsewhere in the Qualified Certificates for Electronic Seals Agreement.

For more information, see clause 6 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.6 Representations and Warranties

SWIFT is responsible for the provision of its Qualified Certificates for Electronic Seals offering, as set out in this *Certificate Policy* and elsewhere in the Qualified Certificates for Electronic Seals Agreement.

The Subscribers are responsible for complying with all obligations and other responsibilities applicable to their use of SWIFT's Qualified Certificates for Electronic Seals offering as set out in this *Certificate Policy* and elsewhere in the Qualified Certificates for Electronic Seals Agreement.

Examples of Subscribers' obligations and responsibilities include (without limitation):

- the protection of the private key(s) related to their SWIFT Qualified Certificate for Electronic Seals
- the protection of the HSM in which the private key of their SWIFT Qualified Certificates for Electronic Seals is stored
- the protection of the Activation Data of their SWIFT Qualified Certificates for Electronic Seals
- the protection of the certificate generation activation secrets of their SWIFT Qualified Certificates for Electronic Seals
- the immediate revocation of their SWIFT Qualified Certificate for Electronic Seals if any of the following circumstances occurs:
 - o the associated private key is lost;
 - o the Subscriber has reasons to believe the confidentiality of the private key has been compromised;
 - o the information in the certificate is no longer correct;
 - o the confidentiality of the certificate generation activation secrets has been compromised or the certificate generation activation secrets are malfunctioning.

The Relying Parties are responsible for complying with their obligations and other responsibilities applicable to their use of SWIFT's Qualified Certificates for Electronic Seals offering as set out in this *Certificate Policy* and elsewhere in the Qualified Certificates for Electronic Seals Agreement.

Examples of Relying Parties' obligations and responsibilities include (without limitation):

- the successful performance of public key operations as a pre-condition for relying on a SWIFT Qualified Certificate for Electronic Seals
- the validation of a SWIFT Qualified Certificate for Electronic Seals by using the SWIFTNet PKI CA's Certificate Revocation Lists (CRLs)
- untrust a SWIFT Qualified Certificate for Electronic Seals once it has been revoked or has expired

9.7 Disclaimers of Warranties

To the maximum extent permitted by applicable law and except as expressly provided in this *Certificate Policy* or elsewhere in the Qualified Certificates for Electronic Seals Agreement or other applicable contractual arrangements between SWIFT and the Subscriber or the Relying Party, SWIFT does not give and specifically excludes and disclaims any warranty of any kind, whether express or implied, statutory or otherwise, with respect to the provision or use of SWIFT's Qualified Certificates for Electronic Seals offering, including (without limitation) any warranty as to the condition, quality, performance, security, non-infringement, merchantability or fitness for a particular purpose.

For more information, see clause 8.5 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.8 Limitation of Liability

The *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions* contain the provisions governing SWIFT's liability to Subscribers or Relying Parties (whether in contract, tort, or otherwise) for or in connection with the provision or use of SWIFT's Qualified Certificates for Electronic Seals offering, including any limitations or exclusions of SWIFT's liability.

For more information, see in particular clause 8 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.9 Indemnities

Indemnities (if any) applicable to SWIFT, Subscribers or Relying Parties are set out in the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

For more information, see clauses 6 and 8 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.10 Term and Termination

This *Certificate Policy* shall be effective from the date of issue and publication, and will remain in force until replaced with a subsequent version, or terminated.

For more information about the term and termination of SWIFT's Qualified Certificate for Electronic Seals offering, see clause 9 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.11 Individual Notices and Communications with Participants

Except when expressly provided otherwise in the Qualified Certificates for Electronic Seals Agreement, all notices from one party to another, will be in writing (in paper or electronic form) and in English.

All notices duly served will be deemed effective upon their publication for or, if sent to the other party, delivery to the intended recipient.

For more information about the conditions to serve correct and valid notices, see clause 12 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.12 Amendments

This *Certificate Policy* shall be reviewed on a regular basis. Like for the other documents that are part of the Qualified Certificates for Electronic Seals Agreement, it can be amended at any time by publishing a new version.

The Subscribers and Relying Parties must ensure that they always refer to the latest available version of this *Certificate Policy* and any other documents part of the Qualified Certificates for Electronic Seals Agreement or other relevant documentation.

Proposed changes to the present *Certificate Policy* or other documents part of the Qualified Certificates for Electronic Seals Agreement will be disseminated to interested parties by publishing the new document on <https://www.swift.com/pkirepository>

The date of publication and the effective date are indicated on the title page of the relevant document. The effective date will at least be fourteen (14) calendar days after the date of publication.

Any errors, updates, or suggested changes to this *Certificate Policy* or other documents part of the Qualified Certificates for Electronic Seals Agreement must be communicated without undue delay to SWIFT (for the attention of the SWIFTNet PKI Policy Management Authority).

9.13 Dispute Resolution Procedures

To make a valid claim, Subscribers and Relying Parties must submit their claim to SWIFT in accordance with the dispute resolution procedure set out in the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

For more information, see clause 14 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

Upon written request from a Subscriber or Relying Party to the SWIFTNet PKI Policy Management Authority (see [section 1.5.2](#)), SWIFT provides identification details of the Subscriber that corresponds to the Subject Distinguished Name in a SWIFT Qualified Certificate for Electronic Seals (see [section 3.1](#)) up to 24 years after the expiry or revocation date of the certificate (whichever occurs first).

9.14 Governing Law

As per clause 15 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*, this *Certificate Policy* and, more generally, the Qualified Certificates for Electronic Seals Agreement and all contractual and non-contractual obligations arising out of them or in connection with them shall be governed by and construed in accordance with Belgian law (without giving effect to any conflict of law provision that would cause the application of other laws).

9.15 Compliance with Applicable Law

In using SWIFT's Qualified Certificates for Electronic Seals offering, Subscribers and Relying Parties must always exercise due diligence and reasonable judgment, and must comply with good industry practice and all relevant laws, regulations, or third-party rights, even if this restricts their usage of SWIFT's Qualified Certificates for Electronic Seals offering.

In particular, Subscribers and Relying Parties must:

- ensure not to use, or try to use, SWIFT's Qualified Certificates for Electronic Seals offering for illegal, illicit or fraudulent purposes, and refrain from any practices that might create confusion about the purposes for which SWIFT's Qualified Certificates for Electronic Seals

- are used (typically, practices that would not permit a clear identification of or would misrepresent the parties effectively involved in a transaction or the nature of the transaction);
- seek all necessary or advisable consents and authorisations and enter into all necessary contractual arrangements in order to ensure that no laws, regulations, or third-party rights are violated (including laws and regulations regarding banking, money transmission, securities, money laundering, terrorist financing, economic sanctions, competition, outsourcing and data transmission).

Subscribers and Relying Parties must also comply with all relevant laws and regulations regarding the export, re-export, import, and use of any products, software, technology, or materials (including cryptographic technology and materials) comprised in or relating to the provision and the use of SWIFT's Qualified Certificates for Electronic Seals offering.

For more information, see clause 5.2 of the *SWIFT Qualified Certificates for Electronic Seals – Terms and Conditions*.

9.16 Miscellaneous Provisions

No stipulation.

Annex – SWIFT Qualified Certificate for Electronic Seals Lifecycle Overview

The lifecycle of a SWIFT Qualified Certificate for Electronic Seals starts with an organisation identifying the need for such a certificate. Refer to the description of Subscriber in [section 1.3.3](#), that is, “Subscribers of SWIFT Qualified Certificates for Electronic Seals are those organisations that contract with SWIFT for the issuance of a SWIFT Qualified Certificate for Electronic Seals in their name. Subscribers are SWIFT users that require a SWIFT Qualified Certificate for Electronic Seals to generate an advanced electronic seal when sending messages and files over the SWIFT network.”

Prerequisite

The subscribing organisation takes the steps required to join SWIFT (if not already the case), and to contract with SWIFT for a service requiring a SWIFT Qualified Certificate for Electronic Seals. As part of joining SWIFT,

- The subscribing organisation will acquire SWIFT Secure IP Network (SIPN) connectivity, SWIFTNet Link (SNL) software used to communicate with SWIFTNet over SIPN, and a Hardware Security Module (HSM) for handling the cryptographic material.
- The subscribing organisation will define at least two LSO accounts that obtain an account on the Secure Channel service, protected with a user ID, a password, and a secure code card. Note: The Subscriber can also define if these LSO accounts need dual authorisation for their activities.

Registration

As part of the ordering and contracting process for Qualified Certificates for Electronic Seals,

- SWIFT will perform an identity validation process, referred to as “*Qualified Certificate for Electronic Seals (QCES) Customer Identification*”. This process is the Subscriber registration phase, and will provide assurance on the identity of the Subscriber and a natural person authorized to represent it. The process requires the physical presence of an authorised representative of the legal person (or equivalent using a Qualified Electronic Signature, as per article 24.1(c) of the eIDAS Regulation). When this QCES Customer Identification process has been performed, the Subscriber is informed of this, and of the status of the outcome (success or failure). Only if the outcome is successful, the subscribing organisation is eligible to obtain a SWIFT Qualified Certificate for Electronic Seals. In this case, SWIFT provides the Subscriber with user documentation on how to request SWIFT Qualified Certificates for Electronic Seals.
- The Subscriber must appoint at least two LSO accounts (from the ones the organisation created at that point, as a part of its SWIFT network connectivity setup) that are henceforth formally mandated to manage the Subscriber’s SWIFT Qualified Certificate(s) for Electronic Seals. This list of mandated LSO accounts is reconfirmed at every subsequent QCES Customer Identification.

If the outcome of the QCES Customer Identification process is successful, then the Subscriber (via one of the mandated LSO accounts) can formally request a SWIFT Qualified Certificate for Electronic Seals.

Certificate Application

A mandated LSO account sends a SWIFT Qualified Certificate for Electronic Seals request through the Secure Channel application. This request is authenticated with the secure code card, and approved by a second LSO account if the dual authorisation functionality was enabled by the Subscriber.

As part of the request, the LSO account specifies a “download password”.

Certificate Application Validation by RA

As result of this Secure Channel request, the SWIFTNet PKI RA will validate the request, and if all validations are positive, the requested certificate will be created.

An important validation step is that the QCES Customer Identification process must have been completed successfully with a validation date no longer than 3 months before the Secure Channel request. In case it is not recent enough, the QCES Customer Identification process has to be executed first. The certificate creation consists of putting the related Subject DN (together with all other certificate parameters – except the public key and “Valid from” date) in the PKI system as “ready for certification”, which results in issuing “certificate generation activation secrets”. These “certificate generation activation secrets” are made available for download by the LSO account using the password defined as part of the request, and an email is sent to this account (and the authorising account) as acknowledgement.

Certificate Request

The LSO account uses a computer connected to SIPN to navigate to the download page, specifies the “download password”, and receives the “certificate generation activation secrets”. This can be performed only once. The “certificate generation activation secrets” remain valid for 180 days.

Note: At this point, if the Subscriber decides that there is no longer a need for the SWIFT Qualified Certificate for Electronic Seals, then he can decide to deactivate the “certificate generation activation secrets” by means of the Secure Channel application.

The LSO account transmits these “certificate generation activation secrets” to an operator of the SNL software (it can be the same person, but typically these are different roles in the organisation). The operator launches the SNL “KMA” application to generate the key pair on the HSM, to specify a password for accessing the private key (“activation data”), and to send the public key together with the “certificate generation activation secrets” to the SWIFTNet PKI CA (transported over SIPN³).

Certification

The SWIFT Qualified Certificate for Electronic Seals is generated based on the public key, the Subject DN, and other certificate parameters as defined by the SWIFTNet PKI RA. The generated SWIFT Qualified Certificate for Electronic Seals is returned to the KMA application.

Certificate Acceptance

The SWIFT Qualified Certificate for Electronic Seals is installed by the KMA application alongside the key pair.

KMA receives from the CA some policy statements as defined by the SWIFTNet PKI RA, requiring the key pair to be generated on HSM, and the password policy to be enforced for the “activation data”. The KMA software enforces these policy statements for the operator.

Renew (Re-key) Certificate

In case the old SWIFT Qualified Certificate for Electronic Seals is expired, revoked, or about to expire, a process enables the Subscriber to obtain a new one. The state “about to expire” is defined as the time-period 90 days before the certificate will expire.

The process to obtain a new SWIFT Qualified Certificate for Electronic Seals consists of the same steps as described above for the initial certificate request:

- Certificate Application
- Certificate Application Validation by RA
Note: this includes the validation of the required conditions for a new Certificate request.
- Certificate Request
- Certification
- Certificate Acceptance

³ Using the PKIX-CMP protocol

Revoke Certificate

At any time, the Subscriber can revoke its SWIFT Qualified Certificate(s) for Electronic Seals, for example, if there is suspicion that the private key is compromised or stolen, or if the private key is lost or deleted. To perform such a revocation, the Subscriber (through one of the mandated LSO accounts) uses the Secure Channel application to request the revocation of its SWIFT Qualified Certificate for Electronic Seals. This request is authenticated with the secure code card, and approved by a second LSO account if the dual authorisation functionality was enabled by the Subscriber.

As result of this Secure Channel request, the SWIFTNet PKI RA will validate the request, and if all validations are positive, it will revoke the certificate. The CRL will be updated and published automatically. After revocation, the LSO account (and, if relevant, the authorising account) receives a confirmation.
