

MyStandards for Corporates

A single, easy-to-use platform to manage specifications from your bank and industry initiatives

Register now to access all your bank's specifications

Key benefits

- Free access for corporates
- Receive bank-specific guidelines in an industry-wide representation
- Faster onboarding process with your bank
- Relevant across all channels
- Premium option to rationalise both your internal and external standards formats

Centralising, implementing and using standards-related information is a huge undertaking for corporates which often involves a lot of time and resources across different departments within a corporation.

MyStandards is an industry initiative gathering message specifications from major banks and market practice groups in a central, user-friendly web platform. It simplifies the communication, implementation and maintenance of all standards-related information between you, your banks and different industry initiatives.

Standards challenge for Corporates

As a corporate dealing with multiple financial institutions, you need first to understand the Message Implementation Guidelines (MIGs) of all the banks you want to work with. The guidelines are typically documented in different ways across a variety of incompatible documentation formats. It is often difficult to clarify the needs and understand what you have to update if you want to start working with an additional bank.

Going through this analysis takes a lot of time. Once the implementation process is initiated, in most cases, corporates will have to embark on a multi-month process with multiple iterations and parties across the project team.

The Solution: MyStandards for Corporates

As a collaborative platform, MyStandards is free for corporates. With free access, you can receive guidelines and updates from your bank as well as different industry initiatives around the world. MyStandards helps you by providing the following benefits:

- A consistent industry-wide representation of your bank's specifications
- Multi-format documentation such as PDF, Excel and XML schemas
- Powerful comparisons to understand the small differences between countries or products of a single bank
- Self-service internet testing using the Readiness Portal
- Shared view of readiness to evaluate the progress of your testing

Industry Initiatives

On top of managing specifications and information from your bank, you can also access industry initiatives' specifications with MyStandards. Our portal enables the industry initiatives to publish their guidelines and updates, showing you the latest documentations and additional restrictions they apply for each message or format. The following specifications are available to you with your free access:

- CGI-MP and SEPA specifications

Both the MT and ISO 20022 standards are used across the globe for many different business processes, products and markets. They are therefore flexible and have many options to cater for all these requirements. Industry initiatives such as CGI-MP or SEPA, specify how the standard should be used for a given market or scenario. As these specifications are published on MyStandards you will be able to check the additional restrictions they applied for each message.

- MT and ISO20022 documentation

MyStandards is a user-friendly and always up-to-date web platform where documentation about the MT and ISO 20022 standards is published. It eases your analysis and understanding of the message formats.

Go further with a MyStandards Premium Licence

While the free access provides you with everything you need to do business with a single bank, a MyStandards Premium Licence allows you to rationalise your messaging formats, both externally and internally with a state-of-the art platform.

You can compare and understand differences between several banks more efficiently, as well as formally document your own implementation while maintaining it easily over time.

MyStandards for Corporates Free License	MyStandards for Corporates Premium License
Access standards and industry initiatives documentation in a clear and convenient format	Understand quickly the differences between different banks
Get everything you need to do business with a single bank (Visit mystandards.swift.com for more details)	Rationalize, document and maintain your own formats

MyStandards Readiness Portal

MyStandards Readiness Portal is an internet application that can be deployed independently from the associated connectivity. A dedicated new portal could be created individually for you by your bank, offering you the following benefits:

- User-friendly solution that enables you to test messages and validate your compliance with the bank specifications in a self-service approach
- Consistent process and format across all the banks and financial institutions that you work with
- Clear view on the testing activities and onboarding process shared by you and your bank
- Integrated with the documentation on MyStandards
- Streamlined user experience as you will be provided only with information that is relevant to you from your banks
- Direct support from the portal, ensuring that your queries will reach the right teams
